and applications of modern forms of microscopy The recent awards of Nobel Prizes awarded for super resolution optical  
microscopy and cryo electron microscopy have demonstrated the rich scientific opportunities for research in novel  
microscopies Earlier Nobel Prizes for electron microscopy the instrument itself and applications to biology scanning probe  
microscopy and holography are a reminder of the central role of microscopy in modern science from the study of  
nanostructures in materials science physics and chemistry to structural biology Separate chapters are devoted to confocal  
fluorescent and related novel optical microscopies coherent diffractive imaging scanning probe microscopy transmission  
electron microscopy in all its modes from aberration corrected and analytical to in situ and time resolved low energy electron  
microscopy photoelectron microscopy cryo electron microscopy in biology and also ion microscopy In addition to serving as  
an essential reference for researchers and teachers in the fields such as materials science condensed matter physics solid

*Defect Control in Semiconductors* K. Sumino, 2012-12-02 Defect control in semiconductors is a key technology for realizing the ultimate possibilities of modern electronics The basis of such control lies in an integrated knowledge of a variety of defect properties From this viewpoint the volume discusses defect related problems in connection with defect control in semiconducting materials such as silicon III V II VI compounds organic semiconductors heterostructure etc The conference brought together scientists in the field of fundamental research and engineers involved in application related to electronic devices in order to promote future research activity in both fields and establish a fundamental knowledge of defect control The main emphasis of the 254 papers presented in this volume is on the control of the concentration distribution structural and electronic states of any types of defects including impurities as well as control of the electrical optical and other activities of defects Due to the extensive length of the contents only the number of papers presented per session is listed below
