

6 Main Types of Post Hoc Analysis

Tukey's HSD

A commonly used method for pairwise comparisons, controlling the type I error rate. It's ideal for equal or nearly equal sample sizes and ensures reliable results across multiple tests.

Best Dissertation Writers

Dunnett's Test

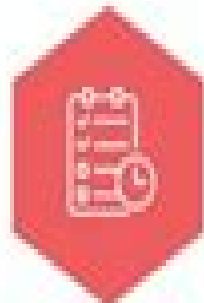

Used for comparing multiple treatment groups to a single control group. It's ideal for experiments where the focus is on how treatments differ from the control group specifically.

Best Dissertation Writers

Bonferroni Correction

A conservative approach that divides the alpha value by the number of comparisons. It reduces the risk of type I errors but may increase the likelihood of type II errors.

Best Dissertation Writers

Newman-Keuls Test

A sequential test for pairwise comparisons, used to control the error rate. It's less conservative than Bonferroni but more prone to type I errors in some situations.

Scheffé Test

A flexible test, effective for unequal group sizes. It compares all possible contrasts between group means, offering robust control of type I errors, though it may be less powerful.

Best Dissertation Writers

Fisher's LSD

A less stringent method for pairwise comparisons. It's more sensitive to differences between groups but can increase type I errors when used for multiple comparisons across many groups.
