Aerospace Engineering on the Back of an Envelope Irwin E. Alber, 2012-03-05 Engineers need to acquire Back of the Envelope survival skills to obtain rough quantitative answers to real world problems particularly when working on projects with enormous complexity and very limited resources In the case studies treated in this book we show step by step examples of the physical arguments and the resulting calculations obtained using the quick fire method We also demonstrate the estimation improvements that can be obtained through the use of more detailed physics based Back of the Envelope engineering models These different methods are used to obtain the solutions to a number of design and performance estimation problems arising from two of the most complex real world engineering projects the Space Shuttle and the Hubble Space Telescope satellite

Engineering Mathematics - III [JNTU Kakinada] TKV Iyengar et al., In this book vector differential calculus is considered which extends the basic concepts of ordinary differential calculus such as continuity and differentiability to vector functions in a simple and natural way The new concepts of gradient divergence and curl are introduced Line surface and volume integrals which occur frequently in connection with physical and engineering problems are defined Three important vector integral theorems Gauss divergence theorem Green s theorem in plane and Stokes theorem are discussed The idea of Laplace transform to develop some useful results has been introduced also demonstrated how the Laplace transform technique is used in solving a class of problems in differential equations Fourier series is an infinite series representation of a periodic function in terms of sines and cosines of an angle and its multiples How Fourier series is useful to solve ordinary and partial differential equations particularly with periodic functions appearing as non homogeneous terms has been discussed This book comprises previous question papers problems at appropriate places and also previous GATE questions at the end of each chapter for the benefit of the students
