Quantitative Systems Biology for Engineering Organisms and Pathways Hilal Taymaz-Nikerel, Alvaro R. Lara, 2016-05-27 Studying organisms as a whole for potential metabolically engineering of organisms for production of biochemicals is essential for industrial biotechnology To this end integrative analysis of different omics measurements transcriptomics proteomics metabolomics fluxomics provides invaluable information Combination of experimental top down and bottom up approaches with powerful analytical tools techniques and mathematical modeling namely quantitative systems

biology currently making the state of art of this discipline is the only practice that would improve our understanding for the purpose The use of high throughput technologies induced the required development of many bioinformatics tools and mathematical methods for the integration of obtained data Such research is significant since compiling information from different levels of a living system and connecting them is not an easy task In particular construction of dynamic models for product improvement has been one of the goals of many research groups In this Research Topic we summarize and bring a general review of the most recent and relevant contributions in quantitative systems biology applied in metabolic modeling perspective We want to make special emphasis on the techniques that can be widely implemented in regular scientific laboratories and in those works that include theoretical presentations With this Research Topic we discuss the importance of applying systems biology approaches for finding metabolic engineering targets for the efficient production of the desired biochemical integrating information from genomes and networks to industrial production Examples and perspectives in the design of new industrially relevant chemicals e g increased titer productivity yield of bio chemicals are welcome Addition to the founded examples potential new techniques that would frontier the research will be part of this topic The significance of multi omics approaches to understand uncover the pathogenesis mechanisms of metabolic diseases is also one of the main topics
