Functional Equations And How To Solve Them 1st Edition:

Functional Equations and How to Solve Them Christopher G. Small, 2007-04-03 Over the years a number of books have been written on the theory of functional equations However very little has been published which helps readers to solve functional equations in mathematics competitions and mathematical problem solving This book fills that gap The student who encounters a functional equation on a mathematics contest will need to investigate solutions to the equation by finding all solutions or by showing that all solutions have a particular property The emphasis here will be on the development of those tools which are most useful in assigning a family of solutions to each functional equation in explicit form At the end of each chapter readers will find a list of problems associated with the material in that chapter The problems vary greatly with the easiest problems being accessible to any high school student who has read the chapter carefully The most difficult problems will be a reasonable challenge to advanced students studying for the International Mathematical Olympiad at the high school level or the William Lowell Putnam Competition for university undergraduates The book ends with an appendix containing topics that provide a springboard for further investigation of the concepts of limits infinite series and continuity

Selfadjoint Operators in Spaces of Functions of Infinitely Many Variables I Uri Makarovich Berezanski, 1986-12-31 Questions in the spectral theory of selfadjoint and normal operators acting in spaces of functions of infinitely many variables are studied in this book and in particular the theory of expansions in generalized eigenfunctions of such operators Both individual operators and arbitrary commuting families of them are considered A theory of generalized functions of infinitely many variables is constructed The circle of questions presented has evolved in recent years especially in connection with problems in quantum field theory This book will be useful to mathematicians and physicists interested in the indicated questions as well as to graduate students and students in advanced university courses

Experimental Mathematics in Action David Bailey, Jonathan Borwein, Neil Calkin, Russell Luke, Roland Girgensohn, Victor Moll, 2007-05-31 With the continued advance of computing power and accessibility the view that real mathematicians don't compute no longer has any traction for a newer generation of mathematicians The goal in this book is to present a coherent variety of accessible examples of modern mathematics where intelligent computing plays a significant role and in so do
