Insight into Magnetorheological Shock Absorbers Janusz Goldasz, Bogdan Sapiński, 2014-12-27 This book deals with magnetorheological fluid theory modeling and applications of automotive magnetorheological dampers. On the theoretical side a review of MR fluid compositions and key factors affecting the characteristics of these fluids is followed by a description of existing applications in the area of vibration isolation and flow mode shock absorbers in particular. As a majority of existing magnetorheological devices operates in a so called flow mode a critical review is carried out in that regard. Specifically the authors highlight common configurations of flow mode magnetorheological shock absorbers or so called MR dampers that have been considered by the automotive industry for controlled chassis applications. The authors focus on single tube dampers utilizing a piston assembly with one coil or multiple coils and at least one annular flow channel in the piston.
