This book is designed for undergraduate students completely new to programming with MATLAB. Case studies and examples are used extensively throughout this book and are at the core of what makes this book so unique. The author believes that the best way to learn MATLAB is to study programs written by experienced programmers and that the quality of these example programs determines the quality of the book. The examples in this book are carefully designed to teach you MATLAB programming as well as to inspire within you your own problem-solving potential. Most of the examples used in this book are designed to solve a whole class of problems rather than a single specific problem. A learn-by-doing teaching approach is used all through the book. You are guided to tackle a problem using MATLAB commands first, and then the commands are explained line by line. This process of learning through hands-on experience is one of the most efficient and pain-free ways of learning MATLAB. This approach, together with the extensive use of ordered textboxes, figures, and tables, greatly reduces the size of the book while still providing you with a book that's comprehensive and easy to follow.
