Project Earth Science Geoff Holt, Nancy W. West, 2011 Project Earth Science Astronomy Revised 2nd Edition involves students in activities that focus on Earth's position in our solar system How do we measure astronomical distances How can we look back in time as we gaze across vast distances in space How would our planet be different without its particular atmosphere and distance to our star What are the geometries among Earth the Moon and the Sun that yield lunar phases and seasons Students explore these concepts and others in 11 teacher tested activities

**The Fossil-Fuelled Climate Crisis** Raymond Murphy, 2020-09-29 This book analyses the threat posed by the continued use of fossil fuels By utilizing Elizabeth Shove's social practices approach and Murphy's own social closure framework the book examines the accelerating treadmill of carbon polluting practices It incorporates externalities theory to investigate how the full cost of fossil fuels is paid by others rather than users and to demonstrate that the environmental commons is a medium for conveying intergenerational monopolisation and exclusion in the Anthropocene Murphy uncovers a pattern of opposition to change when exploiting valuable but dangerous resources He argues that a new faith in mastering nature is emerging as a belief in just in time technological solutions to circumvent having to change fossil fuelled practices The book then moves on to assess proposed solutions including Beck's staging of risk and his hypothesis that the anticipation of global catastrophe will incite emancipation It proposes a novel approach to enhancing foresight and avoid incubating disaster It will appeal to readers interested in an original social science analysis of this creeping crisis and its resolution
