

### AP Biology - Chapter 3 Cellular Respiration Assignment

- What is the relationship between anaerobic and aerobic biology?  
 Anaerobic means "without oxygen" and aerobic means "with oxygen". Aerobic respiration is the process of breaking down glucose to produce energy in the presence of oxygen. Anaerobic respiration is the process of breaking down glucose to produce energy in the absence of oxygen.
- What does an electron transport chain and what is its difference between a lowering and maximum electron potential?  
 The electron transport chain is a series of protein complexes in the mitochondrial membrane that transfer electrons from one molecule to another, creating a proton gradient across the membrane. The difference between a lowering and maximum electron potential is the difference in the energy levels of the electrons before and after they pass through the chain.
- Describe the process and purpose of cell respiration.  
 Cell respiration is the process by which cells convert glucose and oxygen into carbon dioxide and water, releasing energy in the form of ATP. The purpose of cell respiration is to provide the energy needed for the cell to carry out its various functions.
- Explain prokaryotic cell division - binary fission and budding.

- What is surface area to volume ratio and importance of it as it applies to the biological world?  
 The surface area to volume ratio is a measure of the amount of surface area relative to the volume of an object. In biology, this ratio is important because it affects the rate at which substances can enter and leave a cell. A higher surface area to volume ratio allows for a faster exchange of materials, which is essential for the survival of small organisms.
