

1. A game show host has developed a new game called "Grab All You Can." Here's how it works: a contestant reaches his dominant hand (i.e. right hand for right-handed people) into a jar of \$10 bills and grabs as many as he can in one handful. Then he does the same thing with his non-dominant hand in a jar of \$20 bills. Research with many volunteers has determined that the mean number of \$10 bills drawn is 68 with a standard deviation of 9.5, and the mean number of \$20 dollar bills is 58, with a standard deviation of 7.8.
 - (a) If D = the amount of money, in dollars, that a randomly selected contestant grabs from the "\$10 grab," find the mean and standard deviation of D .

 - (b) If T = the total amount of money, in dollars, that a contestant grabs from both jars, find the mean and standard deviation of T .

 - (c) The game's rules are that a contestant must pay \$500 (from previous winnings) for one round of play (that is, one grab from each jar). If G = how much the contestant gains from one round of play, find the mean and standard deviation of G .

2. Suppose that the mean height of policemen is 70 inches with a standard deviation of 3 inches. And suppose that the mean height for policewomen is 65 inches with a standard deviation of 2.5 inches. If heights of policemen and policewomen are Normally distributed, find the probability that a randomly selected policewoman is taller than a randomly selected policeman.
