**Creative
DIY Microcontroller Projects with TinyGo and WebAssembly** Tobias Theel,2021-05-14 Explore embedded programming
and get hands on with real world embedded projects relating to IoT low powered devices and other complex systems using
TinyGo and WebAssembly Key Features Build creative embedded apps with TinyGo using low powered devices and
microcontrollers Understand the practicality involved in integrating hardware and sensors while programming them using
TinyGo Use TinyGo in modern browsers to display embedded applications statistics on WebAssembly dashboards Book
DescriptionWhile often considered a fast and compact programming language Go usually creates large executables that are
difficult to run on low memory or low powered devices such as microcontrollers or IoT TinyGo is a new compiler that allows
developers to compile their programs for such low powered devices As TinyGo supports all the standard features of the Go
programming language you won t have to tweak the code to fit on the microcontroller This book is a hands on guide packed
full of interesting DIY projects that will show you how to build embedded applications You will learn how to program sensors

and work with microcontrollers such as Arduino UNO and Arduino Nano IoT 33 The chapters that follow will show you how to develop multiple real world embedded projects using a variety of popular devices such as LEDs 7 segment displays and timers Next you will progress to build interactive prototypes such as a traffic lights system touchless hand wash timer and more As you advance you ll create an IoT prototype of a weather alert system and display those alerts on the TinyGo WASM dashboard Finally you will build a home automation project that displays stats on the TinyGo WASM dashboard By the end of this microcontroller book you will be equipped with the skills you need to build real world embedded projects using the power of TinyGo What you will learn Discover a variety of TinyGo features and capabilities while programming your embedded devices Explore how to use display devices to present your data Focus on how to make TinyGo interact with multiple sensors for sensing temperature humidity and pressure Program hardware devices such as Arduino Uno and Arduino Nano IoT 33 using TinyGo Understand how TinyGo works with GPIO ADC I2C SPI and MQTT network protocols Build your first TinyGo IoT and home automation prototypes Integrate TinyGo in modern browsers using WebAssembly Who this book is for If you are a Go developer who wants to program low powered devices and hardware such as Arduino UNO and Arduino Nano IoT 33 or if you are a Go developer who wants to extend your knowledge of using Go with WebAssembly while programming Go in the browser then this book is for you Go hobbyist programmers who are interested in learning more about TinyGo by working through the DIY projects covered in the book will also find this hands on guide useful
