Handbook of High-Speed Machining Technology Robert King, 2013-03-08 The United States now spends approximately 115 billion annually to perform its metal removal tasks using conventional machining technology Of this total amount about 14 billion is invested in the aerospace and associated industries It becomes clear that metal removal technology is a very important candidate for rigorous investigation looking toward improvement of productivity within the manufacturing system To aid in this endeavor work has begun to establish a new scientific and technical base that will provide principles upon which manufacturing decisions may be based One of the metal removal areas that has the potential for great economic advantages is high speed machining and related technology This text is concerned with discussions of ways in which high speed machining systems can solve immediate problems of profiling pocketing slotting sculpturing facing turning drilling and thin walled sectioning Benefits to many existing programs are provided by aiding in solving a current management production problem that of efficiently removing large volumes of metal by chip removal The injection of new high rate metal removal techniques into conventional production procedures which have remained basically unchanged for a century presents a formidable systems problem both technically and man agerially The proper solution requires a sophisticated difficult process whereby management worker relationships are reassessed age old machine deSigns reevaluated and a new vista of product process planning and design admitted [Springer Handbook of Mechanical Engineering](#) Karl-Heinrich Grote, Erik K.
