Compendium of Crop Genome Designing for Nutraceuticals Chittaranjan Kole,2023-12-14 The crop plants cater not only to our basic F5 food feed fiber fuel and furniture needs but also provide a number of nutraceuticals with potential nutritional safety and therapeutic properties Many crop plants provide an array of minerals vitamins and antioxidant rich bioactive phytochemicals Increasing incidences of chronic diseases such as cancer diabetes and HIV and malnutrition necessitate global attention to health and nutrition security with equal emphasis to food security This compendium compiles results of researches on biochemical physiological and genetic mechanisms underlying biosynthesis of the health and nutrition related nutraceuticals It also explores the precise breeding strategies for augmentation of their content and amelioration of their quality in crop plants under all commodity categories including cereals and millets oilseeds pulses fruits and nuts and vegetables The compendium comprise 5 sections dedicated to these 5 commodity groups and presents enumeration on the concepts strategies tools and techniques of nutraceutomics These sections include 50 chapters devoted to even number of major crop plants These chapters present deliberations on the biochemistry and medicinal properties of the nutraceuticals contained genetic variation in their contents classical genetics and breeding for their quantitative and qualitative improvement tissue culture and genetic engineering for augmentation of productivity and quality and sources of genes underlying their biosynthesis They also include comprehensive enumeration on genetic mapping of the genes and QTLs controlling the contents and profile of the nutraceuticals and molecular breeding for their further improvement through marker assisted selection and backcross breeding tools Prospects of post genomic precise breeding strategies including genome wide association mapping genomic selection allele mining and genome editing are also discussed This compendium fills the gap in academia and research and development wings of the private sector industries interested in an array of subjects including genetics genomics tissue culture genetic engineering molecular breeding genomics assisted breeding bioinformatics biochemistry physiology pathology entomology pharmacognosy IPR etc and will also facilitate understanding of the policy making agencies and people in the socio economic domain and research sponsoring agencies

Biotechnology of Fruit and Nut Crops, 2nd Edition Richard E. Litz,Fernando Pliego-Alfaro,Jose Ignacio Hormaza,2020-01-29 This book covers the biotechnology of all the major fruit and nut species Since the very successful first edition of this book in 2004 there has been rapid progress for many fruit and nut species in cell culture genomics and genetic transformation especially for citrus and papaya This book covers both these cutting edge technologies and regeneration pathways protoplast culture in vitro mutagenesis ploidy manipulation techniques that have been applied to a wider range of species Three crop species Diospyros kaki persimmon Punica granatum pomegranate and Eriobotrya japonica loquat are included for the first time The chapters are organized by plant family to make it easier to make comparisons and exploitation of work with related species Each chapter discusses the plant family and the related wild species for 38 crop species and has

colour illustrations It is essential for scientists and post graduate students who are engaged in the improvement of fruit nut and plantation crops Achieving sustainable cultivation of tropical fruits Prof Elhadi M. Yahia,2019-12-10 Highlights key innovations in citrus cultivation from genetics to precision agriculture and integrated pest management IPM Covers advances in breeding and cultivation of a range of soft tropical fruits including banana lychee papaya and pomegranate Broad coverage of key stone tropical and subtropical fruits including avocado coconut guava jackfruit and mangoes Conservation and Utilization of Horticultural Genetic Resources P.E. Rajasekharan,V. Ramanatha Rao,2019-06-25 The conservation of crop genetic resources is one of the important elements in efforts to sustainably increase agricultural production in low income countries and to guarantee long term food security especially for the low income population groups in these countries Horticultural crops as high value crops have an important role to play in revitalizing rural economies and can add significantly to national economies Moreover horticulture provides more than twice the number of jobs compared to traditional cereal crop production and the shifting of conventional agriculture towards high value horticulture has increased employment opportunities in developing countries To exploit this potential researchers need a vast array of horticultural genetic resources and information on new traits Horticultural crops which are only a part of PGRFA Plant Genetic Resources for Food and Agriculture are characterized by a wide and varied range of species In fact there are five major horticultural crop groups fruit and nut crops vegetables food legumes roots and tubers and lastly the ornamental and medicinal group In this context the present book provides a comprehensive overview of the current state of conservation and utilization of horticultural genetic resources addressing contemporary approaches to conservation in connection with different technologies including biotechnological approaches as practised in India and in some cases globally It includes a brief chapter on the unique nature of horticultural genetic resources providing a rationale for viewing them as being distinct from field crop genetic resources Subsequent chapters share insights on protocols for the conservation of selected horticultural crops ex situ and focus on the increased need to complement these efforts with in situ conservation approaches Geospatial tools are also briefly described emphasizing their utility with regard to mapping and managing resources The book also explores the wild gene pool in horticulture crops discusses legal aspects related to horticultural genetic resources and biotechnological aspects and describes the key aspects of sustainable management and replenishment Given its scope the book offers a valuable resource for all horticulturists graduate students researchers policymakers conservationists and NGOs engaged in horticulture in particular and biodiversity in general Fruit and Nut Crops P.
