Advances in Carbon Management Technologies Subhas Sikdar, Frank Princiotta, 2020-03-19 Advances in Carbon Management Technologies comprises 43 chapters contributed by experts from all over the world Volume 1 of the book containing 23 chapters discusses the status of technologies capable of yielding substantial reduction of carbon dioxide emissions from major combustion sources Such technologies include renewable energy sources that can replace fossil fuels and technologies to capture CO₂ after fossil fuel combustion or directly from the atmosphere with subsequent permanent long term storage The introductory chapter emphasizes the gravity of the issues related to greenhouse gas emission global temperature correlation the state of the art of key technologies and the necessary emission reductions needed to meet international warming targets Section 1 deals with global challenges associated with key fossil fuel mitigation technologies including removing CO₂ from the atmosphere and emission measurements Section 2 presents technological choices for coal petroleum and natural gas for the purpose of reducing carbon footprints associated with the utilization of such fuels Section 3 deals with promising contributions of alternatives to fossil fuels such as hydropower nuclear solar photovoltaics and wind Chapter 19 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license

Sustainability and Toxicity of Building Materials Emina K. Petrović, Morten Gjerde, Fabricio Chicca, Guy Marriage, 2024-02-10 Sustainability and Toxicity of Building Materials Manufacture Use and Disposal Stages provides a review of toxicity impacts from building materials including the consideration of the toxicity in the extraction and manufacture of the materials and eventual dismantling and disposal This book also offers the potential to stimulate future developments in this area both in terms of knowledge building and methods for future research With the increasing emphasis on sustainable construction it has become important to better understand the impacts of common materials Civil and structural engineers postgraduates researchers as well as architects will find this book to be useful in selecting sustainable building materials While many building and furnishing materials are safe to use in recent decades some have had to be redesigned due to recognition that they contained problem chemicals like formaldehyde Unfortunately there is still limited understanding of the toxic impacts of many synthetic chemicals which means that the risks in this area are not well recognized With increasing interest in using limited resources more sustainably definitions of what is sustainable should be expanded to move from the focus on energy and carbon impacts to also include more explicit consideration of toxicity impacts Examines toxicity in the extraction and manufacturing of materials Presents the short and long term toxicity effects of natural and manmade building materials Guides readers in selecting building materials that have a positive impact on the health of occupants and the environment

Handbook of Composites from Renewable Materials, Structure and Chemistry Vijay Kumar Thakur, Manju Kumari Thakur, Michael R. Kessler, 2017-03-08 This unique multidisciplinary 8 volume set focuses on the emerging issues concerning synthesis

characterization design manufacturing and various other aspects of composite materials from renewable materials and provides a shared platform for both researcher and industry The Handbook of Composites from Renewable Materials comprises a set of 8 individual volumes that brings an interdisciplinary perspective to accomplish a more detailed understanding of the interplay between the synthesis structure characterization processing applications and performance of these advanced materials The Handbook comprises 169 chapters from world renowned experts covering a multitude of natural polymers reinforcement fillers and biodegradable materials Volume 1 is solely focused on the Structure and Chemistry of renewable materials Some of the important topics include but not limited to carbon fibers from sustainable resources polylactic acid composites and composite foams based on natural fibres composites materials from other than cellulosic resources microcrystalline cellulose and related polymer composites tannin based foam renewable feedstock vanillin derived polymer and composites silk biocomposites bioderived adhesives and matrix polymers biomass based formaldehyde free bioresin isolation and characterization of water soluble polysaccharide biobased fillers keratin based materials in biotechnology structure of proteins adsorbed onto bioactive glasses for sustainable composite effect of filler properties on the antioxidant response of starch composites composite of chitosan and its derivate magnetic biochar from discarded agricultural biomass biodegradable polymers for protein and peptide conjugation polyurethanes and polyurethane composites from biobased recycled components

Wood Composites J. Paulo Davim, Alfredo Aguilera, 2017-09-11 Wood composites as part of wood engineering materials has been reaching a constant developing trend being used on a wide range of applications and becoming worldwide as a very promising alternate material face to traditional building materials such as concrete metal and plastics In this part of the series are treated aspects among which advances functionalities in laminates the activation of natural fibres the natural matrix and others industrials manufacturing research advances for wood material as composite

Grand Challenges in Marine Biotechnology Pabulo H. Rampelotto, Antonio Trincone, 2018-05-15 This book serves as essential reading for research scientists and biotechnologists from both academia and industry working in marine biotechnology and related disciplines The book discusses recent advances and challenges in terms of science technology innovation and policy for the development of the field and how marine biotechnology may provide new solutions to some of the grand challenges faced by our society Written in an accessible language the book is also recommended as a reference text for decision makers in government and non governmental organizations in their efforts to foster the development of a global blue economy With less than 5 % of the vast and rich marine environment explored our seas and oceans represent a virtually unexplored resource for the discovery of novel product processes and development of bio inspired synthetic drugs with biotechnological potential As such the marine environment has been considered Earth s last frontier of exploration Recent advances in molecular techniques are providing the necessary tools to access on a larger scale the still untapped ocean resources and consequently unveil the promise of the blue biotechnology Governments are recognizing the potential of

marine biotechnology to provide solutions to some of the Grand Challenges of the 21st Century such as sustainable energy and food sources identification of novel drugs for improved health treatments and providing new industrial materials and processes For this reason advances in marine biotechnology may foster the much needed source of innovation and economic growth in many countries and pave the way towards the development of a global blue economy i e a new economic model based on the sustainable exploration of our ocean ecosystems *Bio-based Wood Adhesives* Zhongqi He,2017-05-25

Adhesive bonding plays an increasing role in the forest product industry and is a key factor for efficiently utilizing timber and other lignocellulosic resources As synthetic wood adhesives are mostly derived from depleting petrochemical resources and have caused increasing environmental concern natural product and byproduct derived adhesives have attracted much attention in the last decades Although adhesives made from plant and animal sources have been in existence since ancient times increased knowledge of their chemistry and improved technical formulation of their preparation are still needed to promote their broader industrial applications The primary goals of this book are to 1 synthesize the fundamental knowledge and latest research on bio based adhesives from a remarkable range of natural products and byproducts 2 identify need areas and provide directions of future bio based adhesive research and 3 help integrating research findings in practical adhesive application for maximal benefits This book covers information on a variety of natural products and byproducts and the latest research on formulation testing and improvement of the relevant adhesives in fifteen chapters written by an international group of accomplished contributors This book will serve as a valuable reference source for university faculty graduate students research scientists agricultural and wood engineers international organization advocates and government agency regulators who work and deal with enhanced utilization of agricultural and forest products and byproducts
