W. Mackintosh, 2015-12-14 This book gives a simplified account of a new fundamental theory of physics It is based on two postulates or laws and from these are derived a set of Field Equations The solutions of these equations account for many of

the features of modern physics These solutions lead to the prediction of Newton's laws of motion and gravitation Coulomb's law and electromagnetism and the prediction of the values of the gravitational constant and the charge on the electron which are close to the measured values They also lead to a formula for Planck's constant and to Schrödinger's equation and the basis for quantum mechanics Particles are not points Structures are proposed for the proton neutron electron electron neutrino muon pion and kaons The theory provides an account of the up down strange charm and bottom quarks and the W A and Z particles The book is mathematical but simplified as much as possible to make the book accessible to a wide range of readers
