Brown's Introduction to Organic Chemistry, Global Edition William H. Brown, Thomas Poon, 2017-06-06 Brown's Introduction to Organic Chemistry provides an introduction to organic chemistry for students who require the fundamentals of organic chemistry as a requirement for their major. It is most suited for a one-semester organic chemistry course. In an attempt to highlight the relevance of the material to students, the authors place a strong emphasis on showing the interrelationship between organic chemistry and other areas of science, particularly the biological and health sciences. The text illustrates the use of organic chemistry as a tool in these sciences; it also stresses the organic compounds, both natural and synthetic, that surround us in everyday life in pharmaceuticals, plastics, fibers, agrochemicals, surface coatings, toiletry preparations, and cosmetics, food additives, adhesives, and elastomers.

Polymers Mohamed Elzagheid, 2025-07-21 The second edition of *Macromolecular Chemistry* broadens into two areas: biomacromolecules (Volume 1) and polymers (Volume 2). *Polymers* covers polymer history, polymerization reactions, polymer morphology, technology, characterization, and testing, processing, and recycling. The book discusses the building blocks of synthetic polymers, comparison of macromolecules and polymers, polymer classification, and illustration of polymer chemical structures. Polymerization reactions such as step-growth polymerization and chain-growth polymerization are extensively discussed. It then presents tacticity, molecular interactions, and polymer crystals. Biodegradable polymers, biomedical polymers, conducting polymers, electroluminescent polymers, water-soluble polymers, additives, adhesives, fibers, and coatings are described. The next section explores inorganic polymers such as polysilanes, polysiloxanes, and polyphosphazenes. The book then delves into polymer characterization and testing, including Infrared Spectroscopy, Raman Spectroscopy, NMR, X-ray Spectroscopy, and Electron Microscopy, and the last section addresses selected polymer processing techniques such as moulding, casting, extrusion, coatings, and foaming.
