The Mindful Interview Method Gil Zamora, 2023-07-19 The Mindful Interview Method Retrieving Cognitive Evidence provides investigators with a proven methodology to gather authentic reliable information from eyewitnesses to help identify potential suspects The book offers police and non law enforcement readers step by step techniques to improve gathering reliable evidence through a mindful interview process The author also provides an assessment component that can measure the reliability of previous interviews performed and further help to improve the interview process the skills of the investigator and thus the reliability of cognitive evidence gathered from future interviews It is notable that there is minimal to no instruction or training currently offered to those individuals most often tasked with interviewing an eyewitness about a crime as part of criminal investigations Despite the lack of training and certification we allow interviewers to conduct questioning in the face of well established research as to the malleability of human memory The assumption is that officials trained in the rules of evidence will innately ask the right questions and in the proper manner without the proper understanding of the fragility of human memory or the proper training That assumption is false and the reality is quite the opposite In fact we learn of cases commonplace in the media that frequently involve questionable interview tactics misidentifications and wrongful convictions of innocent people The Mindful Interview Method uses cognitive research to inform the methods and principles for a mindful approach to gathering only the information the subject remembers This is the best way to use evidence based lines of questioning to perform interviews that elicit the most reliable accounts and information for investigative purposes Considering current reforms on best practices throughout the criminal justice system the book provides a path forward for professional interviewers to adopt interview methodologies that guide the practitioner

Facilitating Young People's Development Michael Behr, Jeffrey H. D. Cornelius-White, 2008 Facilitating children's and adolescents' growth has been a challenge and major concern for person-centred work since the beginning of the approach in the 1940s. During the past decade a shift in this domain has generated numerous new concepts, research and practice, making a considerable impact on both the professional tasks and training of educators, counsellors and psychotherapists. Fifteen original chapters and a foreword from Brian Thorne describe this development. The chapters began as presentations from a symposium at the Potsdam PCE 2006 World Association conference, thus reflecting international perspectives emerging around the world today. Framed by two chapters from the editors, the book provides a comprehensive overview of the state of the art of person-centred work with children, adolescents and parents and identifies emerging themes in the field.

The work is edited and written by experienced professionals with medical, legal or dual training, and who are internationally renowned for their experience or expertise within their areas of specialty. The Editorial Board reflects the multidisciplinary, multi-jurisdictional and global emphasis of forensic and legal medicine. The individual articles are written in a clear and concise manner and are supplemented by diagrams, tables and full color images. Key further reading and extensive cross-referencing make this work an invaluable reference source for undergraduates and graduates looking for an introduction to key fields and experts reading outside their specialization. [Criminology, Penology and Police Science Abstracts](#), 1997 *MEMORY ENHANCING TECHNIQUES FOR INVESTIGATIVE INTERVIEWING* Ronald P. Fisher, R.E. Geiselman, 1992-01-01 Despite the obvious importance of eyewitness information in criminal investigation, police receive surprisingly little instruction on how to conduct an effective interview with a cooperative eyewitness. More than half of police departments have no formal training whatsoever for newly appointed investigators. Most texts in police science either completely omit the issue of effective interviewing techniques or provide only superficial coverage. This manual provides guiding principles to effective interviewing with specific techniques to be used and others to be avoided. There are principles of memory retrieval so that the reader will understand why to employ specific techniques, for example when to use open-ended versus direct short answer questions, effective use of pauses, asking follow-up questions, cues to name and number recall etc. There is the strategy of interview sequential structure that is what to probe for at the beginning, middle and end of the interview. Also included are practical exercises and real world experiences. The book will also be helpful for attorneys in conducting investigative interviews.
