Solving ODEs with MATLAB L. F. Shampine, I. Gladwell, S. Thompson, 2003-04-28 This concise text first published in 2003 is for a one semester course for upper level undergraduates and beginning graduate students in engineering science and mathematics and can also serve as a quick reference for professionals The major topics in ordinary differential equations initial value problems boundary value problems and delay differential equations are usually taught in three separate semester long courses This single book provides a sound treatment of all three in fewer than 300 pages Each chapter begins with a discussion of the facts of life for the problem mainly by means of examples Numerical methods for the problem are then developed but only those methods most widely used The treatment of each method is brief and technical issues are minimized but all the issues important in practice and for understanding the codes are discussed The last part of each chapter is a tutorial that shows how to solve problems by means of small but realistic examples Learning MATLAB Walter Gander, 2015-11-21 This comprehensive and stimulating introduction to Matlab a computer language now widely used for technical computing is based on an introductory course held at Qian Weichang College Shanghai University in the fall of 2014 Teaching and learning a substantial programming language aren't always straightforward tasks Accordingly this textbook is not meant to cover the whole range of this high performance technical programming environment but to motivate first and second year undergraduate students in mathematics and computer science to learn Matlab by studying representative problems developing algorithms and programming them in Matlab While several topics are taken from the field of scientific computing the main emphasis is on programming A wealth of examples are completely discussed and solved allowing students to learn Matlab by doing by solving problems comparing approaches and assessing the proposed solutions

The Matrix Eigenvalue Problem David S. Watkins, 2007-01-01 The first in depth complete and unified theoretical discussion of the two most important classes of algorithms for solving matrix eigenvalue problems QR like algorithms for dense problems and Krylov subspace methods for sparse problems The author discusses the theory of the generic GR algorithm including special cases for example QR SR HR and the development of Krylov subspace methods This book also addresses a generic Krylov process and the Arnoldi and various Lanczos algorithms which are obtained as special cases Theoretical and computational exercises guide students step by step to the results Downloadable MATLAB programs compiled by the author are available on a supplementary Web site Readers of this book are expected to be familiar with the basic ideas of linear algebra and to have had some experience with matrix computations Ideal for graduate students or as a reference book for researchers and users of eigenvalue codes **Mathematics II | AICTE Prescribed Textbook - English** Garima Singh, 2021-11-01 Mathematics II is a Compulsory paper for the first year students of Diploma engineering courses common to all branches Syllabus of this book is strictly aligned to the model curriculum of AICTE And academic content is amalgamated with the concept of outcome based education Apart from diploma it is useful for all students who are interested
