

### AP Statistics Investigative Task 08

#### Question 1a

An online survey of 1000 college students reported the percentage of students who will attend college, not attend college, or are unsure whether to attend.

If the probability of a student attending college is  $p$ , the probability of a student not attending college is  $1 - p$ , and the probability of a student being unsure is  $1 - 2p$ .

#### Question 1b

The results are as follows: 10% of students reported that the percentage of students who will attend college after high school is greater than 50%, 40% reported that the percentage is less than 50%, 20% reported that the percentage is exactly 50%, and 30% reported that they are unsure whether to attend college. However, the conditions for conducting a normal distribution are not satisfied because the sample size is not large enough to ensure that the sampling distribution of the sample proportion is approximately normal.

The interval is between 0.20 and 0.40 because 10% of students are in the interval  $(0.5, 1.0]$  and 30% of high school seniors plan to attend college after high school. This means that 10% of students will report a 10% probability of attending college, and 30% will report a 30% probability.

#### Question 2a

Yes. The probability of success is the same for both groups: 10% of 1000 is 100.

Yes. The probability of success is the same for both groups: 10% of 1000 is 100.
