## **Chapter 25 Water Resources Earth Science:**

Management of Water Resources in Protected Areas Hermes Farfán González, José Luis Corvea Porras, Irene de Bustamente Gutiérrez, James W. LaMoreaux, 2013-03-14 Natural ecosystems are heavily dependent on water as it is essential to the development of life. The ecology and landscape play an important role in the quality and availability of water. It is no coincidence that exceptional hydrological phenomena are found in protected areas. Such is the case with, for example, the geothermic occurrences principally geysers in America's Yellowstone National Park, the oldest park in the world. The Ramsar wetlands where the ecosystem's dependency on water is strongly evident. The Iguazu Falls on the border of Argentina and Brazil or the Zapata Swamp, the largest of its kind on the Caribbean island of Cuba, further exemplify this point. However, in many cases, the conservation strategies for hydraulic resources in protected areas are ignored or simply deprived of the attention they require. There are many types of suitable management strategies for planning and protecting our valuable treasures. Hydraulic resource management in protected areas is something that must not be separated from these conservation measures. The first Symposium for the Management of Hydraulic Resources in Protected Areas was intended to be a framework of communication about experiences with water resource management in protected areas. Advances in research and possible solutions to the problems within these areas were discussed. The contributions in this proceedings volume are grouped under seven main themes: Purification and reuse of wastewater in rural communities; Impact of public use on water resources; Vulnerability and risks associated with aquifers; Design and management water resources in protected areas; Research and monitoring of water resources in protected areas; Water and its importance as a source of renewable energy in protected spaces and Geodiversity and conservation of areas with hydraulic heritage.
