**Rheology of Drag Reducing Fluids** Aroon Shenoy, 2020-03-25. This book explains theoretical derivations and presents expressions for fluid and convective turbulent flow of mildly elastic fluids in various internal and external flow situations involving different types of geometries such as the smooth/rough circular pipes, annular ducts, curved tubes, vertical flat plates, and channels. Understanding the methodology of the analyses facilitates appreciation for the rationale used for deriving expressions of

parameters relevant to the turbulent flow of mildly elastic fluids This knowledge serves as a driving force for developing new ideas investigating new situations and extending theoretical analyses to other unexplored areas of the rheology of mildly elastic drag reducing fluids The book suits a range of functions it can be used to teach elective upper level undergraduate or graduate courses for chemical engineers material scientists mechanical engineers and polymer scientists guide researchers unexposed to this alluring and interesting area of drag reduction and serve as a reference to all who want to explore and expand the areas dealt with in this book
