Ford Big-Block Parts Interchange George Reid,2017-12-15 Over the course of performance car history and specifically muscle car history big block engines are particularly beloved and for good reason Not only are they the essence of what a muscle car is but before modern technology and stroker engines they were also the best way to make a lot of horsepower All of the Detroit manufacturers had their versions of big block engines and Ford was no exception Actually Ford was somewhat unique in that it had two very different big block engine designs during the muscle car era The FE engine was a design pioneered in the late 1950s primarily as a more powerful replacement for the dated Y block design because cars were becoming bigger and heavier and therefore necessitated more power to move What started as torquey engines meant to move heavyweight sedans morphed into screaming high performance mills that won Le Mans and drag racing championships through the 1960s By the late 1960s the design was dated so Ford replaced the FE design with the 385 series also known as the Lima design which was more similar to the canted valve Cleveland design being pioneered at the same time It didn t share the 1960s pedigree of racing success but the new design was better in almost every way it exists via Ford motorsports offerings to this day In Ford Big Block Parts Interchange Ford expert and historian George Reid covers both engines completely Interchange and availability for all engine components are covered including cranks rods pistons camshafts engine blocks intake and exhaust manifolds carburetors distributors and more Expanding from the previous edition of High Performance Ford Parts Interchange that covered both small and big block engines in one volume this book cuts out the small block information and devotes every page to the FE Series and 385 big blocks from Ford which allows for more

and within three months the standard 289ci became available Carroll Shelby went on to win the 1965 World Sports Car Championship using a HP 289ci Aluminium block and cylinder head pushrod versions designed in late 1962 had been constructed by early 1963 in preparation for that year's Indianapolis 500 and the DOHC four valve per cylinder 255ci raced in the 1964 and 1965 Indy 500 winning the latter outright The 302ci replaced the 289ci for the 1968 car model year and at Le Mans in 1968 and 1969 GT40 cars won outright using this variant of the small block In 1965 1966 and 1967 HP 289ci powered Mustangs won the SCCA B Production Championship and 1966 and 1967 Trans Am Championships A Bud Moore Engineering Boss 302 Mustang won the 1970 Trans Am Championship Ford invested much time and expertise into its racing activities in the 1960s and there's little doubt that the V8 Small Block engines took the company to the forefront of the racing world until it withdrew from the sport in 1970
