experimental data and graphs where appropriate as well as supporting tables and figures with a tutorial approach

Holography Manual P. G. Lingenfelder, 1969 Holography first attracted widespread interest in this decade with the application by Leith and Upatnieks of the laser as the source of coherent light Literature on the subject trends to be general and theoretical This document is a compilation of experimental techniques commonly used in the construction of holograms including refinements developed at NELC It supplies the needed practical approach to basic holography and includes a description of the basic holographic laboratory and its equipment Author *High-Pressure Shock Compression of Solids VIII* L.C. Chhabildas, Lee Davison, Y. Horie, 2006-03-30 Research in the field of shock physics and ballistic impact has always been intimately tied to progress in development of facilities for accelerating projectiles to high velocity and instrumentation for recording impact phenomena The chapters of this book written by leading US and European experts cover a broad range of topics and address researchers concerned with questions of material behaviour under impulsive loading and the equations of state of matter as well as the design of suitable instrumentation such as gas guns and high speed diagnostics Applications include high speed impact dynamics the inner composition of planets syntheses of new materials and materials processing Among the more technologically oriented applications treated is the testing of the flight characteristics of aeroballistic models and the assessment of impacts in the aerospace industry *21st Century Nanoscience* Klaus D.
