**Introduction to Manufacturing Processes** John A. Schey, 1987

This revision aims to address changes that have taken effect since the publication of the second edition. The most significant change has been in the attitude of industry to concurrent engineering. In 1987 mostly lip service was paid to it; today it has become general practice in most competitive corporations. In the second edition the author discussed this as the manufacturing system. In the third edition it becomes the focal point. Concurrent engineering involves the whole product realization process including product concept, performance criteria, mechanical design and analysis, materials selection, process planning and modeling, production control, automation, assembly management and others. An introductory text cannot possibly cover all of these topics; hence the emphasis of the third edition remains on the physical principles and the application of these principles to processes. The major difference relative to the second edition will be the emphasis on interactions between process and design. Capabilities and limitations of processes will be highlighted to show what they mean in terms of design possibilities and design modifications will be suggested for ease of manufacture. Impact on the environment and possibilities for recycling will be woven into the entire text.

**Manufacturing Engineering and Technology** Serope Kalpakjian, 1992. A comprehensive text for students in manufacturing, mechanical, industrial and metallurgical and materials engineering programs providing an understanding of the interrelationships among the many technical and economic factors involved in manufacturing. This revised and updated edition, second, was 1992. It expands its coverage of technological advances including abrasive machining, computer simulation of manufacturing processes and systems instrumentation, laser beams in manufacturing, nanophase ceramics, rapid prototyping, semisolid metalworking, surface texturing and tool condition monitoring.
