*Pricing and Risk Management of Synthetic CDOs* Anna Schlösser,2011-02-04 This book considers the one factor copula model for credit portfolios that are used for pricing synthetic CDO structures as well as for risk management and measurement applications involving the generation of scenarios for the complete universe of risk factors and the inclusion of CDO structures in a portfolio context For this objective it is especially important to have a computationally fast model that can also be used in a scenario simulation framework The well known Gaussian copula model is extended in various ways in

order to improve its drawbacks of correlation smile and time inconsistency Also the application of the large homogeneous cell assumption that allows to differentiate between rating classes makes the model convenient and powerful for practical applications The Crash NIG extension introduces an important regime switching feature allowing the possibility of a market crash that is characterized by a high correlation regime

**Select Topics of Econophysics** Amit Sinha,2024-11-04

Economics requires understanding and analyzing forces that bring buyers and sellers to a market place who then negotiate exchanges of goods and services based on a mutually agreeable price Economists have their own method of modeling whereby models are first conceived of some notion of economic and financial thinking before being empirically tested and anomalies are then recognized if the observed data is inconsistent with the hypothetical underpinning This is in inherent contradiction with the modeling approaches of physicists who develop their theories principle and laws after observing empirical data The awareness that physics can enlighten the understanding of human behavior and thus economics and the interest of physicists in applying their training and models to understanding the complexities of finance and economics led to the creation of a new field of study appropriately termed as Econophysics Selected Topics on Econophysics is a collection of essays on topics that enhance and enrich our understanding of economic modeling when the same rigor of modelling used by physicists is brought to developing financial and economic theories These articles include discussions on modeling bitcoins stock index modeling using geometric Brownian motion agent based modeling wealth distribution modeling as well as modeling related to fractal regression and chaotic processes This interdisciplinary book will interest researchers graduate students and professionals in the fields of economics finance as well as physics
