to consider the possibility of utilizing probability theory in all essential fields of geotechnics It deals in detail with in situ and
laboratory tests the evaluation of soil physical characteristics the preparatory phase and the individual problems of design
including load bearing capacity prediction of settlements dimensioning of slopes and retaining walls and quality control of
earthworks Numerous possibilities for and examples of the parallel utilization of deterministic and stochastic methods are
given in the book creating a connection between conventional and new modern methodologies It demonstrates by examples
that the only possibility of meeting technical and economic requirements simultaneously is by using the methods of
probability theory The book also gives an account of new geotechnical and mathematical results of the author post evaluation
of settlements and tilts plotting of statistical bore profiles elimination of the asymmetry of distribution by transformation etc
The book enables practitioners and to acquire new modern design methods and research to develop methods It will also be
