Analyzing Neural Time Series Data Mike X Cohen,2014-01-17 A comprehensive guide to the conceptual mathematical and implementational aspects of analyzing electrical brain signals including data from MEG EEG and LFP recordings This book offers a comprehensive guide to the theory and practice of analyzing electrical brain signals It explains the conceptual mathematical and implementational via Matlab programming aspects of time time frequency and synchronization based analyses of magnetoencephalography MEG electroencephalography EEG and local field potential LFP recordings from humans and nonhuman animals It is the only book on the topic that covers both the theoretical background and the implementation in language that can be understood by readers without extensive formal training in mathematics including cognitive scientists neuroscientists and psychologists Readers who go through the book chapter by chapter and implement the examples in Matlab will develop an understanding of why and how analyses are performed how to interpret results what the methodological issues are and how to perform single subject level and group level analyses Researchers who are familiar with using automated programs to perform advanced analyses will learn what happens when they click the analyze now button The book provides sample data and downloadable Matlab code Each of the 38 chapters covers one analysis topic and these topics progress from simple to advanced Most chapters conclude with exercises that further develop the material covered in the chapter Many of the methods presented including convolution the Fourier transform and Euler s formula are fundamental and form the groundwork for other advanced data analysis methods Readers who master the methods in the book will be well prepared to learn other approaches

Brain-Computer Interfaces Desney S. Tan,Anton Nijholt,2010-06-10 For generations humans have fantasized about the ability to create devices that can see into a person s mind and thoughts or to communicate and interact with machines through thought alone Such ideas have long captured the imagination of humankind in the form of ancient myths and modern science fiction stories Recent advances in cognitive neuroscience and brain imaging technologies have started to turn these myths into a reality and are providing us with the ability to interface directly with the human brain This ability is made possible through the use of sensors that monitor physical processes within the brain which correspond with certain forms of thought Brain Computer Interfaces Applying our Minds to Human Computer Interaction broadly surveys research in the

Brain Computer Interface domain More specifically each chapter articulates some of the challenges and opportunities for using brain sensing in Human Computer Interaction work as well as applying Human Computer Interaction solutions to brain sensing work For researchers with little or no expertise in neuroscience or brain sensing the book provides background information to equip them to not only appreciate the state of the art but also ideally to engage in novel research For expert Brain Computer Interface researchers the book introduces ideas that can help in the quest to interpret intentional brain control and develop the ultimate input device It challenges researchers to further explore passive brain sensing to evaluate interfaces and feed into adaptive computing systems Most importantly the book will connect multiple communities allowing research to leverage their work and expertise and blaze into the future

Learned Brain Self-Regulation for Emotional Processing and Attentional Modulation: From Theory to Clinical Applications Sergio Ruiz, Ranganatha Sitaram, Niels Birbaumer, Francisco Javier Zamorano, 2016-10-19 Mounting evidence in the last years has demonstrated that self regulation of brain activity can successfully be achieved by neurofeedback NF These methodologies have constituted themselves as new tools for cognitive neuroscience establishing causal links between voluntary brain activations and cognition and behavior and as potential novel approaches for clinical applications in severe neuropsychiatric disorders e g schizophrenia depression Parkinson s disease etc Current developments of brain imaging based neurofeedback include the study of the behavioral modifications and neural reorganization produced by learned regulation of the activity of circumscribed brain regions and neuronal network activations In a rapidly developing field many open questions and controversies have arisen i e choosing the proper experimental design the adequate use of control conditions and subjects the mechanism of learning involved in brain self regulation and the still unexplored potential long lasting effect on brain reorganization and clinical alleviation among others This special issue on self regulation of the brain of emotion and attention using NF approaches interested authors to report technical and methodological advances scientific investigations in understanding the relation between brain activity and behaviour using NF and finally studies developing clinical treatment of emotional and attentional disorders The editors of this special issue anticipate rapid developments in this emerging field
