

SOLVING SUBOKU

What is suboku?

You would imagine that with such a name the puzzle originated in Japan, but it has been around for many years in the UK. However, the Japanese found an example under the title Number Place in an American magazine and introduced it as something quite different, so missing number place, which translates as logic or logic place. It immediately caught on in Japan, where number puzzles are much more prevalent than word puzzles. (Crosswords don't work well in the Japanese language.)

The suboku puzzle reached main status in Japan in 2004 and then more spread to the UK through the puzzle pages of national newspapers. The Daily Telegraph used the name Suboku but you may see it called number place elsewhere. However, there is no doubt that the word has been adopted into modern parlance. Thank the Internet!

Suboku is not a mathematical or arithmetical puzzle. It works just as well if the numbers are substituted with letters or some other symbols, but numbers work best.

3			8	3	4			
7					4	8	2	1
		9	4	1		8	3	
4	6		5	7	1			
1	2	5	3					7
		7	2	4				9

Rows and columns are referred to with row number first, followed by the column number. 4,5 is row 4, column 5. 1,8 is row 1, column 8. Rows are numbered 1-9 clockwise from top-left, 4th, 5th, 6th, 7th.

The challenge

There is an unclued suboku puzzle. It consists of a 9x9 grid that has been subdivided into 9 smaller grids of 3x3 squares. Each puzzle has a logical and unique solution. To solve the puzzle, each row, column and box must contain each of the numbers 1 to 9.

Throughout the document I refer to the other puzzles on the grid, a row, 2x3 grid or a box and the cell that contains the number as a square.

by Michael Mopham

About guessing

Try not to think you have progressed to the tough and thorny puzzles, guessing is not only totally unnecessary, but will lead you to solutions that may make the puzzle virtually unsolvable. Simple logic is all that is required for gentle and moderate puzzles. Only a small proportion of my suboku will require deep analysis, and that is dealt with later in a few introductions.

Making a start

1

To solve suboku puzzles you will not guess. You will use yourself questions like "If a 1 is in the box, will it go in the column?" or "If a 9 is already in the row, can a 9 go in the square?"

To make a start, look at each of the boxes and see which squares are empty, at the same time checking that square's column and row for a missing number.

In this example look at box 6. There is no 8 in the row, but there is an 8 in column 7 and in column 8. The only place for an 8 in row 6, and in the box the only square available is in row 6, col 6 so fill in the 8. The first solved square.

			8	3	4			
3					4	8	2	1
7								
		9	4	1		8	3	
4	6		5	7	1			
								7
1	2	5	3					9
		7	2	4			8
