Environmental Engineering James R. Mihelcic, 2014-01-03 **Green Stormwater Infrastructure Fundamentals and Design** Allen P. Davis, William F. Hunt, Robert G. Traver, 2022-07-26 Green Stormwater Infrastructure Fundamentals and Design Discover novel stormwater control measures to make for a greener tomorrow The protection of our aquatic resources is growing in importance as the effects of climate change and continued urbanization are felt throughout the world While most rain that falls onto vegetated spaces infiltrates the soil rain that falls onto impervious surfaces will not increasing downstream flooding and erosion and causing impaired water quality Impervious surfaces such as road infrastructure rooftops and parking areas all increase runoff and mobilize many pollutants that have deposited on these surfaces that are then carried into our waterways Proper management of this stormwater through green infrastructure is essential to address these challenges and reduce the environmental and ecological impacts brought about by this runoff This book brings into focus resilient stormwater control measures SCMs for the reduction of stormwater flows and associated pollutants that can detrimentally impact our local environmental and ecological systems These interventions are green infrastructure based utilizing natural hydrologic and environmental features using soil and vegetation to manage stormwater

These technologies include water harvesting bioretention and bioinfiltration vegetated swales and filter strips permeable pavements sand filters green roofs and stormwater wetlands among others The basic science and engineering of these technologies is discussed including performance information and best maintenance practices Green Stormwater Infrastructure readers will also find Research informed resilient SCM design fundamentals Diagrams developed by the authors to enhance understanding Case studies to illustrate the points elucidated in the book End of chapter problems with a separate solutions manual Green Stormwater Infrastructure is an ideal resource for environmental civil and biological engineers and environmental scientists in the consulting field Landscape architects managers and engineers of watershed districts and members of federal state and local governmental agencies especially those in the departments of environmental protection and transportation will find many uses for this guidebook It will also be of interest to professors upper level undergraduates and graduate students in environmental civil and biological engineering programs
