Internal Combustion Engine Ferguson:

Internal Combustion Engines Allan T. Kirkpatrick, 2020-09-03 A comprehensive resource covering the foundational thermal fluid sciences and engineering analysis techniques used to design and develop internal combustion engines Internal Combustion Engines Applied Thermosciences Fourth Edition combines foundational thermal fluid sciences with engineering analysis techniques for modeling and predicting the performance of internal combustion engines This new 4th edition includes brand new material on New engine technologies and concepts Effects of engine speed on performance and emissions Fluid mechanics of intake and exhaust flow in engines Turbocharger and supercharger performance analysis Chemical kinetic modeling reaction mechanisms and emissions Advanced combustion processes including low temperature combustion Piston ring and journal bearing friction analysis The 4th Edition expands on the combined analytical and numerical approaches used successfully in previous editions Students and engineers are provided with several new tools for applying the fundamental principles of thermodynamics fluid mechanics and heat transfer to internal combustion engines Each chapter includes MATLAB programs and examples showing how to perform detailed engineering computations The chapters also have an increased number of homework problems with which the reader can gauge their progress and retention All the software is open source so that readers can see in detail how computational analysis and the design of engines is performed A companion website is also provided offering access to the MATLAB computer programs Internal Combustion Engines Colin R. Ferguson, 1986-01-17 Focusing on thermodynamic analysis from the requisite first law to more sophisticated applications and engine design here is a modern introduction to internal combustion engines and their mechanics It covers the many types of internal combustion engines including spark ignition compression ignition and stratified charge engines and examines processes keeping equations of state simple by assuming constant specific heats Equations are limited to heat engines and later applied to combustion engines Topics include realistic equations of state stoichiometry predictions of chemical equilibrium engine performance criteria and friction which is discussed in terms of the hydrodynamic theory of lubrication and experimental methods such as dimensional analysis Index of Patents Issued from the United States Patent Office United States.
