

4 myths about cybersecurity in Startups

Myth #1

We are not an interesting target for attackers

Myth #2

Security requires a lot of money, we just don't have it for now

Myth #3

If somebody will decide to hack us, they will make it happen anyways

Myth #4

Since we are a small company, it's not that important if somebody hacks us. It will not affect our business or the damage will be minor

Protect your APIs and Web Applications

Reality #1

99% of the threats are automated already, and there is an unofficial "market" that allows you to buy access, data, etc

Reality #2

99% of the security depends on people like engineers who can easily pick this knowledge for free

Reality #3

It's true only for governments and targets where the cost of attacks is not important. For the rest of businesses, it's about how much they should spend to hack you

Reality #4

It will be valuable when you become bigger. All the cybersecurity incidents, data breaches, hacks, etc will affect your business even after several years.
