Troubled Waters Richard A. Bartlett, 1995 Since 1908 the corporate giant now known as Champion International has operated a pulp and paper mill along the banks of the Pigeon River in Canton North Carolina As a result during most of those years this once sparkling Appalachian stream has been virtually useless except as an industrial sewer foamy foul smelling molasses colored By polluting the river the mill that brought prosperity to Canton stunted the economic growth of the downstream communities in Cocke County Tennessee Although public pressure to clean up the Pigeon surfaced intermittently it has been only in the years since 1985 that two organizations the Pigeon River Action Group and the Dead Pigeon River Council have mounted a sustained drive against the ongoing pollution Today following a multimillion dollar upgrading of the Champion mill the Pigeon River is cleaner but hardly pristine Moreover there is little evidence that Champion carried out its modernization for any reasons other than economic ones

Constructed Subsurface Wetlands Abdel Razik Ahmed Zidan, Mohammed Ahmed Abdel Hady, 2018-01-03 With a sharp focus on environmental pollution and its impact on life and nature scientists and engineers have studied the water treatment effect of natural wetlands for many years resulting in the development of constructed wetlands CWs for treating wastewater This informative new book provides current information and guidance on the construction performance operation and maintenance of subsurface flow constructed wetlands of domestic and municipal

wastewater The focus of the volume is to evaluate the performance of horizontal subsurface flow constructed wetlands in treating domestic wastewater to establish the limit that can be safely discharged to agricultural drains Two step procedures were used for the preparation of this book Using modeling and statistical analyses of treated water samples showed a significant difference between different media for the treatment of most pollutants The authors went on to design artificial neural network models ANNs using Matlab software to simulate some of the experimental data and to anticipate the parameters of output concentration The wetland systems have the ability to deal with various pollutants with different concentrations and to decrease the treated water to the standard limits This volume presents the main role of emergent plants for treatment performance in the constructed wetlands and will be a very important resource for engineers in this field as well as for both undergraduate and graduate students Environmental Engineering Gerard Kiely,1997 Introduction to Environmental Engineering Mackenzie L.
