Geospatial Analytics for Environmental Pollution Modeling Fayma Mushtaq,Majid Farooq,Alok Bhushan Mukherjee,Mili Ghosh Nee Lala,2023-12-01 This book aims

to provide a comprehensive study on various aspects of environmental pollution dynamics using geospatial technology and modeling techniques. The utility of geospatial technology will be demonstrated for the effective study of environmental pollution as space and location are very important for effective environmental health surveillance. The timeliness of the work is due to the increasing relevance of geospatial technology applications in environmental health investigations. Moreover, different types of pollution are covered in detail, including air and soil, all of which are analyzed using latest Remote Sensing and GIS technology. The basics of environmental pollution and its impacts are covered in the book's first part, while the second part focuses on the use of geospatial technology in investigating and modeling various instances of environmental pollution. The third part discusses policy measures for mitigating environmental pollution hazards using geospatial analyses and data to craft informed policy decisions. The primary audience for the book is researchers working in the field of environmental pollution with incorporation of geospatial technology, including upper level undergraduate and graduate students taking courses in remote sensing and its environmental applications. The secondary audience is academicians, planners, environmentalists, and policymakers working in the field of environment protection and management.

FOOD SECURITY IN INDIA S. Ramaswamy, L. Surulivel, 2019-06-06 Chapter I Introduction Chapter II Food Security: Inter and Intranational Perspectives Chapter III Concepts, Theories and Food Security Aspects Chapter IV Profile of the Study Area Chapter V Food Security among Socially Excluded Communities in Rural Tamil Nadu Chapter VI Summary of Major Findings and Conclusion References

The right to food and freedom from hunger re-emerged during the 1990s. The historical World Food Summit was held in Rome in 1996, in which 185 countries participated and signed the Rome Declaration on World Food Security, which reaffirmed the right of everyone to have access to safe and nutritious food. Consequently, the right to adequate food is recognized as a fundamental human right. The world communities further pledged in 2000 to cut the number of the world's hungry people to half between 1990 and 2015 as one of the Millennium Development Goals. United Nations 2008 Food security is an important means to realize the right to food. It means the assured access to adequate food to all members of the household throughout the year. The Nobel Laureate Amartya Sen (1981) has suggested a framework of food entitlement in order to understand the genesis of hunger and the access to food. According to him, own production, stored wealth, employment, kinship, and government transfers are all possible sources of food entitlement. Food security, as defined by the Food and Agriculture Organisation of the United Nations (FAO, 2005), exists when all people at all times have physical, social, and economic access to sufficient, safe, and nutritious food that meets their dietary needs and food preferences for an active and healthy life. Household food security is the application of this concept to the family level, with individuals within the households as the focus of concern. India has been witnessing the phenomenon of erratic monsoons consistently. It has serious implications on the food sufficiency and food security of the country. Poor monsoons also affect the welfare of people in terms of availability of drinking water and employment opportunities. Studies on food security have not been carried out in Rural
