Advances in Automatic Differentiation Christian H. Bischof,H. Martin Bückner,Paul Hovland,Uwe Naumann,Jean Utke,2008-08-17 The Fifth International Conference on Automatic Differentiation held from August 11 to 15 2008 in Bonn Germany is the most recent one in a series that began in Breckenridge USA in 1991 and continued in Santa Fe USA in 1996 Nice France in 2000 and Chicago USA in 2004 The 31 papers included in these proceedings reflect the state of the art in automatic differentiation AD with respect to theory applications and tool development Overall 53 authors from institutions in 9 countries contributed demonstrating the worldwide acceptance of AD technology in computational science Recently it was shown that the problem underlying AD is indeed NP hard formally proving the inherently challenging nature of this technology So most likely no deterministic silver bullet polynomial algorithm can be devised that delivers optimum performance for general codes In this

context the exploitation of domain specific structural information is a driving issue in advancing practical AD tool and algorithm development This trend is prominently reflected in many of the publications in this volume not only in a better understanding of the interplay of AD and certain mathematical paradigms but in particular in the use of hierarchical AD approaches that judiciously employ general AD techniques in application specific algorithmic harnesses In this context the understanding of structures such as sparsity of derivatives or generalizations of this concept like scarcity plays a critical role in particular for higher derivative computations
