New Challenges in Economic Policy, Business, and Management Anna Ujwary-Gil, Marta Gancarczyk, 2020-01-01

The first part of this volume broadens the understanding of contemporary industrial policy in local regional national and international contexts The chapter by Wojnicka Sycz 2020 undertakes one of the most important challenges in RIS3 i e the evaluation of the impact of regional SS industries on the development of Polish regions Based on the spatial panel models for 2012 2017 she reveals the positive impact of SS industries employment dynamics on regional GDP per capita The chapter responds to the research gap in a direct measurement of how SS areas affect regional development The results provide the rationale for policy makers to pursue these strategies further The chapter contributes to regional New Industrial Policy by proving the efficiency of SS in strengthening regional performance Factors and barriers to the development of smart mobility in mediumsized Polish cities are the focus of the chapter by Kachniewska 2020 The author applies a comprehensive set of methods to tackle this issue and identifies the conditions for smart mobility drawing primarily on expert opinions The results enable a natural generalization of the identified determinants to the similar context of Polish towns the more important that the research on medium cities is much rarer than studies on metropolises This contribution belongs to the research streams of city governance and databased services which are closely connected to and dependent on industrial digital transformation Moreover smart mobility addresses the objective of environmental protection one of the crucial targets of NIP Godlewska Dziobo 2020 performs international comparisons between Central and Eastern European Countries in 2020 2018 Particularly she focuses on the sectoral transformation of the employment structure in these countries Besides the important observations of spatial dynamics in sectoral structures the chapter points to the increased importance of services relative to manufacturing in contemporary structural transformations Thus it justifies the expanded scope of New Industrial Policy that encompasses not only industry recently refreshed with 4 0 Revolution but also services particularly the digital ones The chapter by Czech 2020 identifies the impact of global debt on the national amounts outstanding of credit default swap contracts CDS in nonfinancial institutions She finds the dynamics of the CDS notional amounts outstanding in response to global household indebtedness and total non financial sector indebtedness in domestic banks This contribution brings valuable practical insights about the core and dynamics of CDS and their usefulness in alleviating risks in international exchange We find this input particularly relevant for industries and enterprises operating in global value chains Widera 2020 performs a spatial analysis of the induced population potential of the communes in the Opolska region in 2000 and 2018 The econometric analysis revealed both the own potential of the communes and the interactions with neighboring communes to develop this potential These findings are important to theorize about the bottom level sources of territorial units potential both internal and those stemming from spatial interactions We find these conclusions relevant to understand local level origins of regional transformations as well as interdependencies among local territorial units The next two parts of this

volume present micro level and bottomup contexts for industrial policy Particularly these are the insights from management and business research and from the research on governing various stakeholder interests and networks In the second part based on management and business theory and empirical evidence the authors discuss human resource and technological challenges faced by the contemporary industry Potoczek 2020 performs a bibliometric research to recognize the advancement of the process approach in organizations She finds the research on process improvement as emerging The major research community in that area belongs to the IT field while management researchers are still a minor group The author recommends the increased interest from the management field as conducive to the 4 0 transformation of organizational processes These results provide policy relevant input to the understanding of how academic research tackles digital transformation in organizational processes The chapter by Igielski 2020 uses a survey among a sample of large enterprise senior managers headquartered in Poland to check whether and how they develop employee skills for the challenges of Industry 4 0 The results are pessimistic since they reveal the lack of adaptive and developmental actions in this regard Nevertheless there is also a positive sign namely the awareness of the challenges posed by the 4 0 revolution Thus the chapter is valuable for the recommendations as to competence development in industrial transition to the digital economy Flak 2020 presents an interesting test for the system of organizational terms as to its usefulness in the practice of motivating people and in a dedicated software Based on a research experiment in real life business settings the author proves the applicability of theory driven organizational terms in software applications supporting managers in their motivating functions The chapter contributes important observations as to the interrelations among managerial and technological resources in motivating employees Sztorc 2020 investigates lean management tools at hotels in Poland based on a large sample of hotel representatives The results are helpful in understanding the types of lean management tools as well as their major targets in the researched organizations The input of the study rests in filling the research gap as to the particular tools of lean management applied in the hotel industry to improve services and processes The focus of this chapter on a particular industry provides a relevant basis for further application and upgrading of this service sector The chapter by Mazurkiewicz 2020 offers an assessment of the impact of national culture on career orientation and career values among Polish and Chinese students of economics Surprisingly the value system does not differ much between the two national samples despite the distinct characteristics of the two national cultures according to Hofstede s method Consequently the author assumes national culture as moderator of career values rather than their determinant These results provide a contribution to the understanding of job motivations among future corporate employees a critical determinant of all industrial transitions Kowalik 2020 investigates the economic benefits perceived by student participants of scientific projects Based on the survey the author reveals students recognition of scientific projects as bringing economic effects The study offers practical implications for young people engaging in research activities as well as for research policy that might acknowledge

additional important outcomes besides purely scientific objectives The third part discusses how governing networks and interests can ensure sustainable and socially responsible industries and enterprises Sectoral and industrial collaborations are supposed to enhance industrial convergence EOCIC 2019 In this vein Lis 2020 focuses on collaborative attitudes in clusters and technological parks Cluster organizations are established to rip the localization and agglomeration economies as well as synergies from cooperative links Despite some history of operations the surveyed Polish cluster initiatives and technology parks still reveal low development of enterprise cooperation The author suggests self evaluation of management and participants of the researched organizations to understand the accomplished level of collaboration and derive practical implications This contribution is important to understand the performance of some organizational measures of industrial policy and their real input to industrial transformation The chapter by Kowalczyk 2020 investigates sociocultural conditions of CSR practices in the construction industry of selected European countries Based on a survey with a large convenience sample the author confirms the strength of stakeholder pressure on CSR practice as well as the mediating role of company culture in this relationship At the same time country differences were indicated as significant for CSR practice and worth further explanation of its variance This study is valuable for the explanation of interests and stakeholder pressure affecting a particular industry thus determining the development conditions of that industry Another industry specific study has been proposed by Kurzak Mabrouk 2020 who focuses on food businesses This chapter addresses the critical strategic direction of NIP that refers to sustainable and responsible growth with regard to environmental protection The author performed the interviews with top and middle managers of a large representative sample of Polish food companies The findings are optimistic since the majority of companies undertake the efforts towards comprehensive sustainable development strategies voluntarily and not only due to legal enforcement Still the researched enterprises do not fully apply these strategies as yet Resonating with the study by Lis 2020 Fliieger 2020 identifies network types according to the collaboration maturity level in a local government unit The research on collaborative networks in public organizations still remains unique Therefore this study fills the research gap The author uses a casebased approach to identify the network features that change according to the maturity level of relationships The findings are useful for the practice of developing collaboration in local governments and contribute to our understanding of the context for industrial development

Control and reduction of costs More innovation Increased security Decreased exposure to risk Demonstration of compliance Improved quality of support Improved business continuity resource The authoritative title published by the globally respected Open Group gives Managers reliable and independent guidance that will help to support decisions and actions in this key operational area **Cloud Computing** ,2016 Cloud Computing Nayan B. Ruparelia,2016-05-13 Why cloud computing represents a paradigm shift for business and how business users can best take advantage of cloud services Most of the information available on cloud computing is either highly technical with details that are irrelevant to non technologists or pure marketing hype in which the cloud is simply a selling point This book however explains the cloud from the user s viewpoint the business user s in particular Nayan Ruparelia explains what the cloud is when to use it and when not to how to select a cloud service how to integrate it with other technologies and what the best practices are for using cloud computing Cutting through the hype Ruparelia cites the simple and basic definition of cloud computing from the National Institute of Science and Technology a model enabling ubiquitous convenient on demand network access to a shared pool of configurable computing resources Thus with cloud computing businesses can harness information technology resources usually available only to large enterprises And this Ruparelia demonstrates represents a paradigm shift for business It will ease funding for startups alter business plans and allow big businesses greater agility Ruparelia discusses the key issues for any organization considering cloud computing service level agreements business service delivery and consumption finance legal jurisdiction security and social responsibility He introduces novel concepts made possible by cloud computing cloud cells or specialist clouds for specific uses the personal cloud the cloud of things and cloud service exchanges He examines use case patterns in terms of infrastructure and platform software information and business process and he explains how to transition to a cloud service Current and future users will find this book an indispensable guide to the cloud Dot.cloud Peter Fingar,2009 In *Dot Cloud The 21st Century Business Platform* business strategy expert and former CIO Peter Fingar explains the main ideas of Cloud Computing in lay terms *The evolution process of the Cloud Computing Business Model* Jan Morgenthal,2013-01-14 Masterarbeit aus dem Jahr 2012 im Fachbereich Informatik Technische Informatik Ewha Womans University Sprache Deutsch Abstract It s stupidity It s worse than stupidity it s a marketing hype campaign 1 Richard Stallmann founder of Free Software Foundation and creator of the computer operating system GNU GNU s Not Unix quoted in *The Guardian* about Cloud Computing paradigm on September 29 2008 Without any doubts Cloud Computing is THE current buzzword in the information and telecommunication industry since 2007 The hype around Cloud Computing is impressive but also confusing as Stallmann s quotation reveals Among various market research institutes governmental agencies of different countries or business consultancies the market of Cloud Computing services will increase immense For example Forrester Research predicts that the global market from 40 7 billion in 2010 will rise to 241 billion per year by 2020 Ried Kisker 2011 p 3 The existence and enormous growth of the Cloud Computing services is obvious but mere the fact what

exactly is Cloud Computing still occurs for confusion The scholars around Armbrust et al 2010 quoted Larry Ellison CEO of Oracle The interesting thing about Cloud Computing is that we've redefined Cloud Computing to include everything that we already do I don't understand what we would do differently in the light of Cloud Computing other than change the wording of some of our ads The term Cloud Computing is used in the Information Technology IT industry and research area for about four years and is considered as the next revolution of the IT sector Although the phenomenon of Cloud Computing is still in its infant stage it is considered to be a strategic change point of information technology Chorafas 2011 p 58 Among many scholars Cloud Computing is seen as an innovation of computing Koch and Breul 2009 discuss If industry analysts are correct we are at an inflection point a true paradigm change in the evolution of computing The evolution process of Cloud Computing is diversified and will be discussed in more detail in the subsequent section 2.4 of this paper The main problem remains about Cloud Computing paradigm is a widely accepted definition of Cloud Computing services Vaquero et al 2009 Hence even for service providers and consumers it is difficult to delimit the area of Cloud Computing services
