Taming HAL Asaf Degani, 2004-01-17 Machines dominate our lives from alarm clocks that wake us up in the morning to radios that lull us to sleep Most of our interactions with automated machines and computers are problem free but more often than we would like they can be irritating and confusing This is frequently harmless such as a VCR recording the wrong show but when it involves a critical system like an autopilot or medical device it can be a matter of life or death Taming HAL seeks to explain these miscommunications between humans and machines by exploring user interfaces of everyday devices Degani examines thirty different systems for

human use including watches consumer electronic products Internet applications cars medical equipment navigation systems onboard cruise ships and autopilots of commercial aircraft Readers will discover why interfaces between people and machines all too often do not work and what needs to be done to avoid potential tragedies *IHM-HCI 2001* Jean Vanderdonckt, Ann Blandford, Alain Derycke, 2001 *The Unified Modeling Language*, 2003 Proceedings of the XIVth Triennial Congress of the International Ergonomics Association and 44th Annual Meeting of the Human Factors and Ergonomics Society : Ergonomics for the New Millennium International Ergonomics Association. Peters, Witold Pedrycz, 2000 A clear cut practical approach to software development Emphasizing both the design and analysis of the technology Peters and Pedrycz have written a comprehensive and complete text on a quantitative approach to software engineering As you read the text you ll learn the software design practices that are standard practice in the industry today Practical approaches to specifying designing and testing software as well as the foundations of Software Engineering are also presented And the latest information in the field additional experiments and solutions to selected problems are available at the authors s web site <http://www.ee.umanitoba.ca/clib/main.html> Key Features Thorough coverage is provided on the quantitative aspects of software Engineering including software measures software quality software costs and software reliability A complete case study allows students to trace the application of methods and practices in each chapter Examples found throughout the text are in C and Java A wide range of elementary and intermediate problems as well as more advanced research problems are available at the end of each chapter Students are given the opportunity to expand their horizons through frequent references to related web pages *Software Engineering of Fault Tolerant Systems* P. Pelliccione, 2007 In architecting dependable systems what is required to improve the overall system robustness is fault tolerance Many methods have been proposed to this end the solutions are usually considered late during the design and implementation phases of the software life cycle e g Java and Windows NT exception handling thus reducing the effectiveness error and fault handling Since the system design typically models only normal behaviour of the system while ignoring exceptional ones the implementation of the system is unable to handle abnormal events Consequently the system may fail in unexpected ways due to faults It has been argued that fault tolerance management during the entire life cycle improves the overall system robustness and that different classes of threats need to be identified for and dealt with at each distinct phase of software development depending on the abstraction level of the software system being modelled This book builds on this trend and investigates how fault tolerance mechanisms can be applied when engineering a software system In particular it identifies the new problems arising in this area

introduces the new models to be applied at different abstraction levels defines methodologies for model driven engineering of such systems and outlines the new technologies and validation and verification environments supporting this **ACM Transactions on Computer-human Interaction** ,2004 Presents original research that spans the field of human computer interaction The primary emphasis has been on results of broad application but the journal also publishes work focused on special domains on special requirements on ethical issues the full range of design development and use of interactive systems
