severity in pine plantations The third chapter documents the impact of alternative fuels treatments on soil carbon respiration patterns in the pine plantations and shows that mastication produces short term reductions in respiration rates and soil moisture The final chapter further examines the relationships of fire induced tree injuries forest floor structure and environmental factors to soil respiration response to fuels treatments Each chapter is written as an independent manuscript they collectively serve to expand the limited understanding of the effectiveness and ecological consequences of fire and fuels treatments in coniferous forests Abstract **Canadian Journal of Forest Research** ,2010 **Proceedings of the Section on Statistical Education** American Statistical Association.
