

A Comparative Study of Academic Performance between Male and Female Students at University Level in Bangladesh

Mst. Bithi Akter , Md. Torikul Islam, Anis Mahomed

Department of Statistics, Jahangirnagar University, Savar, Dhaka, Bangladesh

Abstract

For more than a decade, we have seen that at the university level in Bangladesh, girls have achieved better academic results than boys. Academics have blamed boys for their outward attitude and misuse of mobile phones and the internet.

The study is conducted to investigate the important factors that affect the academic performance of university level students in Bangladesh. And it has also been determined how much higher the risk is due to the low academic performance of males than females. A cross sectional study is conducted among 990 students of 12 top public universities in different locations in Bangladesh. For each university, we have selected an equal number of male and female graduate and postgraduate students only who have passed within recent three years. Here we consider the merit position in graduate and post-graduate label (1-10th place) as a dependent variable and the marital status, parent's educational level, grandfater's occupation, household's income status (BDT), family status, residential area, background educational result, girlfriend/boyfriend relationship status, career goal, smoking status, involvement of student politics, tuition trend, internet using time, a library using status, residential place in the study period, class attendance as the independent variable. Binary logistic regression model, chi-square test and simple descriptive analysis are used for data analysis. The binary logistics model is used to find out the factors for better academic results among male and female students.

Keywords: Academic performance, Factors, Cross sectional study, Public University, Bangladesh.

1. Introduction

For an educational institution in a country, students are one of the most significant assets. And the academic performance of the students is directly linked to the social and economic development of the country. A quality full graduates will become a good wealth for a country thus is the one kind of responsible for the country's economic and social development as well as its can be make a great leader of the country. The student's academic achievement plays an important role in producing the best quality graduates [1].

Many researchers conducted detailed studies about the factors associated the student performance at different study levels. Educational success of the student is heavily reliant on the social status of the student's grandfater in a society [2]. The different study result provides the information is that the significant different parent's income and social status has significantly affected the academic result of the students [3], as well as the students higher levels of educational performance (university) is highly associated with the higher secondary educational performance [4]. So, student's educational background is one of the most important factors for student's further academic achievement and it indicates the future academic performance of the student's [5]. Several types of study conducted for finding and analyzing the associated factors for the academic performance of the students at different educational levels. Their finding identifies some specific factors like, student's educational background, household income, grandfater educational level, learning methods, socio-economic status of the students, and also the residential area of the students. Grandfater's socio-economic status like parents' academic qualifications, occupations, and income status are also factors for academic achievement. The results of the different study conclude that the academic performance of the students is mostly dependent upon the parent's socio-economical condition. So, the students belonging to
