New Optimization Techniques in Engineering Godfrey C. Onwubolu,B. V. Babu,2013-03-14 Presently general purpose optimization techniques such as Simulated Annealing and Genetic Algorithms have become standard optimization techniques Concerted research efforts have been made recently in order to invent novel optimization techniques for solving real life problems which have the attributes of memory update and population based search solutions The book describes a variety of these novel optimization techniques which in most cases outperform the standard optimization techniques in many application areas New Optimization Techniques in Engineering reports applications and results of the novel optimization techniques considering a multitude of practical problems in the different engineering disciplines presenting both the background of the subject area and the techniques for solving the problems

Sustainable bioenergy potential in Zambia Food and Agriculture Organization of the United Nations ,Ministry of Energy of Zambia,2021-04-30 Zambia is richly endowed with a wide range of biomass sources including woodlands forests agricultural residues and livestock waste Biomass energy contributes supplies over 70 percent of the country s energy needs Due to the current extraction and consumption methods the use of biomass energy has been linked with detrimental environmental effects such as deforestation and forest degradation as well as climate change due to the loss of carbon sinks Inefficient utilisation of biomass contributes significantly to deforestation which is estimated at between 79 000 150 000 ha per year and negatively affects the health and income of rural households that depend on forest products for their livelihoods Sustainable bioenergy strategies and alternative bioenergy solutions need to be defined and integrated into current efforts of the country to increase stable and sustainable access to energy This report assesses the country context and defines which bioenergy options can be viable considering a number of solutions for electricity production cooking fuels and transport fuels

at the provincial and district level Possible options originating from crop residues livestock residues and forest plantation harvesting residues are identified having netted out agriculture and forestry needs The assessment now needs to be followed by local verification and investment to deploy an initial set of bioenergy projects and test the findings on the ground

Waste Valorisation Carol Sze Ki Lin, Guneet Kaur, Chong Li, Xiaofeng Yang, 2020-09-18 A guide to the wide variety of waste valorisation techniques related to various biomass waste materials and by products Waste Valorisation provides a comprehensive review of waste chemistry and its application to the generation of value added products The authors noted experts on the topic offer a clear understanding of waste diversity drivers and policies governing its valorisation based on the location The book provides information on the principles behind various valorisation schemes and offers a description of general treatment options with their evaluation guidelines in terms of cost energy consumption and waste generation Each of the book's chapters contain an introduction which summarises the current production and processing methods yields energy sources and other pertinent information for each specific type of waste The authors focus on the most relevant novel technologies for value added processing of waste streams or industrial by products which can readily be integrated into current waste management systems They also provide the pertinent technical economic social and environmental evaluations of bioconversions as future sustainable technologies in a biorefinery This important book Presents the most current technologies which integrate waste and or by product valorisation Includes discussions on end product purity and life cycle assessment challenges Explores relevant novel technologies for value added processing of waste streams or industrial by products which can be integrated into current waste management systems Offers a guide to waste reuse a key sustainability goal for existing biorefineries wishing to reduce material and environmental costs Written for academic researchers and industrial scientists working in agricultural and food production bioconversions and waste management professionals Waste Valorisation is an authoritative guide to the chemistry and applications of waste materials and provides an overview of the most recent developments in the field AIChE Symposium Series American Institute of Chemical Engineers, 2001

Desalination Research Progress Daniel J. Delgado, Pablo Moreno, 2008 As freshwater resources continue to decline as the population grows and development activities continue desalination has taken on a sense of urgency Desalination refers to any of several processes that remove excess salt and other minerals from water Desalination may also refer to the removal of salts and minerals more generally as in soil desalination This book includes within its scope distillation membranes reverse osmosis electrodialysis ion exchange freezing water purification and water reuse and wastewater treatment This new volume examines new research in this frontier field **On-Line Fault Detection and Supervision in the Chemical Process Industries 1998**

P.S. Dhurjati, Sylvie Cauvin, 1998-10-20 The field of On Line Fault Detection and Supervision in the Chemical Process Industries is relatively young Major activity in this area has taken place only in the last fifteen years The goals of the first workshop in Delaware were to discuss various methodologies necessary for solving industrial problems in

fault diagnosis supervision and to encourage interactions between academia and industry This workshop also focused on development and evaluation of methodologies for on line fault detection and supervision in the chemical process industries It addressed theory application validation performance and evaluation of methodologies such as parameter estimation observers parity equations signal analysis methods classification rule based systems with probabilistic approaches fuzzy logic and neural networks There are several trends that make the topic of this workshop especially relevant in today s world The first is the tremendous advances made in automation and information technology that can potentially bring in an ever increasing amount of information on to computer screens in the operating room of a plant Avoiding problems of information overload and converting plant data to on line useful knowledge is a key challenge In some respects one can draw parallels here to biological evolution where over billions of years human beings have evolved mental models to interpret the huge amount of information received through their senses In the absence of the time advantage that evolution has had we have to rely on methodologies such as those presented in this workshop to provide assistance to operators and engineers in interpreting plant information A second trend that makes this field relevant in today s world is the increasing emphasis on environment and safety Community activism and accidents such as those in Bhopal India have caused media spotlights to be turned on the smallest of toxic releases or loss of life due to chemical accidents The negative publicity generated by such events as well as the need to maintain the image of an environmentally conscious company make industry more sensitive to the issues of early detection of faults The third trend that makes this field very relevant is that of the globalization of the world economy Increasing globalization of the chemical process industry puts pressure on economic competitiveness and higher productivity This implies reduced down time due to faults quick and flexible response of production to supply and demand changes increasing reliance on automation and reduced personnel

Fifth International Conference on Foundations of Computer-Aided Process Design Michael F. Malone, James A. Trainham, Brice Carnahan, 2000 Looks at challenges for the future including the broader challenge of extending design to include creating new value for a company and a discussion of how emerging technologies particularly increased computer speeds may impact future design
