Agile Data-Oriented Research Tools to Support Smallholder Farm System Transformation James Hammond, Mark Van Wijk, Aniruddha Ghosh, Tim Pagella, Jacob Van Etten, 2023-05-09 Smallholder farming systems contribute a substantial quantity of the food consumed in many lower and middle income countries and contribute to the national and local economies. Despite the importance of smallholder farming a transformation is needed in order to deliver food security and decent incomes for the farmers themselves and at the national level. This transformation must also be sustainable in terms of environmental impacts and social equity in order to be successful in the long term. The pressures of population growth, climate change and land fragmentation compound the problem. Addressing these overlapping issues is a big challenge. One obstacle is the lack of good quality granular data linking these issues together. Household surveys are the workhorse method for gathering such data but there are well known problems that prevent household survey data from building up a big picture and delivering insights beyond the geographical boundary of each individual study. Such obstacles include the lack of access to datasets, differences in survey design and respondent biases. Agile data oriented research tools can help to overcome these challenges. We use the term agile to imply methods that do not attempt exhaustive measurements which are designed to be easy to use and which entail some degree of flexibility in terms of adaptation to local conditions and integration with other tools or methods. Often these methods also nudge the behavior of tool users towards best practices. In recent years various research tools and approaches have been published which fit within our definition of agile data oriented research tools. The domains these tools function in include monitoring and evaluation, intervention targeting, tailored information delivery, citizen science, credit scoring and user feedback collection, all with the overarching aim to improve data quality and access for those studying the sustainable development of smallholder farming systems. The goal of this Research Topic is to better define that niche, the ecosystem of tools and current practices and to explore how such approaches can provide the underpinning knowledge required for the transformation of smallholder farming systems. One example of an agile data oriented research tool is the Rural Household Multi Indicator Survey (RHoMIS). It is a modular digital system for building household surveys addressing the common topics in smallholder development. It was purposefully designed to give a broad overview of the farm system whilst keeping survey duration to a minimum to be user friendly in implementation and to be sufficiently flexible to function in a broad variety of locations and projects. Since 2015 it has been used by 30 organizations in 32 countries to interview over 34 000 households. The tool and database are open access and a community of practice is developing around the tool. We particularly welcome contributions that engage with the RHoMIS tool and data. However we also describe the tool in order to provide an example of what is meant by an agile data oriented research tool and welcome contributions focusing on other tools or methodologies. We encourage the submission of manuscripts addressing the above topic and those which fit within one of the following three sub themes: i) Perspectives or review articles which explore the niche best practices

or promising approaches in agile data oriented research tools for smallholder farm system transformation Also technology and code articles that describe new tools are welcomed ii Original research articles presenting analyses based on data derived from agile data oriented tools used at the project level Examples include impact evaluations adoption studies targeting studies or adaptive management and should reflect on the additional benefit leveraged by the agile method applied iii Original research articles that make use of the large amounts of data generated by such agile methods and or link between agile data and other data sources Examples include meta analyses of data from multiple studies layering data collected from different agile tools or linking agile data to remote sensing or large scale modeling outputs **Capitalist**

Humanitarianism Lucia Hulsether,2023-01-04 The struggle against neoliberal order has gained momentum over the last five decades to the point that economic elites have not only adapted to the Left s critiques but incorporated them for capitalist expansion Venture funds expose their ties to slavery and pledge to invest in racial equity Banks pitch microloans as a path to indigenous self determination Fair trade brands narrate consumption as an act of feminist solidarity with women artisans in the global South In Capitalist Humanitarianism Lucia Hulsether examines these projects and the contexts of their emergence Blending historical and ethnographic styles and traversing intimate and global scales Hulsether tracks how neoliberal self critique creates new institutional hegemonies that in turn reproduce racial and neocolonial dispossession From the archives of Christian fair traders to luxury social entrepreneurship conferences from US finance offices to Guatemalan towns flooded with their loan products from service economy desperation to the internal contradictions of social movements Hulsether argues that capitalist humanitarian projects are fueled as much by a profit motive as by a hope that racial capitalism can redeem the losses that accumulate in its wake **Financial Inclusion in Asia and Beyond** Tony

Isabelle Baltenweck,Bernard Bett,Simeon Kaitibie,2022-01-28 The Effects of Adult Women Education - Impact Evaluation of a Program in Chiapas Monica Schuster,2009 Master s Thesis from the year 2008 in the subject Business economics Didactics Economic Pedagogy grade 1 0 Universit degli Studi di Milano 50 entries in the bibliography language English abstract The study presents the findings of a qualitative evaluation of a women education program in Chiapas implemented

by the Mexican microfinance Ngo Alternativa Solidaria AlSol The paper tries to assess the effects of the intervention on women s income and household s living standards women s empowerment and mobility women s and children s health conditions and confidence in modern health posts as well as children s primary and secondary school enrollment In the last section I moreover try to explore which participants or implementation characteristics positively influence women s performance in the program The experimental design is based on cross sectional data on program beneficiaries and non beneficiaries Propensity score matching was applied to available baseline data to reduce observable pre program differences between treatment and control groups Results suggest that the program has a positive and significant impact on women s income although no immediate repercussion on the household living standard is detected Similarly women s probability of participating in intrahousehold decision making augments in 4 out of 9 analyzed cases Probably due to a potential bias in wellbeing perceptions of more educated women the outcome on individuals health conditions remains ambiguous whereas the utilization of modern health providers and the probability of children s school enrollment increase through treatment participation Finally less remote areas smaller microfinance groups and women dealing with higher loan amounts are associated with better exam test scores The findings may have useful implications on AlSol s program implementation and future expansion plans
