Cortes-Vazquez,2018-12-07 Since the 2008 financial crash the expansion of neoliberalism has had an enormous impact on nature society relations around the world In response various environmental movements have emerged opposing the neoliberal restructuring of environmental policies using arguments that often bridge traditional divisions between the environmental and labour agendas The Right to Nature explores the differing experiences of a number of environmental social movements and struggles from the point of view of both activists and academics This collection attempts to both document the social ecological impacts of neoliberal attempts to exploit non human nature in the post crisis context and to analyse the opposition of emerging environmental movements and their demands for a radically different production of nature based on social needs and environmental justice It also provides a necessary space for the exchange of ideas and experiences between academics and activists and aims to motivate further academic activist collaborations around alternative and counter hegemonic re thinking of environmental politics This book will be of great interest to students scholars and activists interested in environmental policy environmental justice social and environmental movements

War, Resistance and Counter-Resistance in Modern Times Francis Feeley,2010-08-11 These essays on war

resistance and counter resistance represent an original approach to understanding how political constraints on human behavior and the resistance movements to which these restrictions give rise produce counter resistant forces which represent new constraints which in turn often generate new and innovative behaviors which sometimes create new crystallizations of cultural expression and occasionally influence institutions and traditions This new anthology offers a unique analysis of the important role political constraints play in the production of creative thinking and the development of systematic projects aimed at human liberation In the preface Francis Feeley clearly states the purpose of this book which is to demonstrate how resistance movements have often given birth to counter resistance measures employed mostly by state agencies aimed at stifling the self realization of certain groups and promoting the self realization of other organized interests The following essays are a composite of writings by political activists poets and academic scholars The introduction offers a brief description of major resistance movements in the United States This historical overview presents a context for the appearance of the 20th century resistance movements described in the following chapters We are alerted from the start that one of the unifying themes of these essays is the dialectical relationship between social movements and political institutions producing democracy within American institutions another theme will be how these social contradictions which generate the growth of democracy have proven time and again to operate beyond the control of capitalist interests both in France and within the United States thereby giving rise to many species of democratic expression Gilles Vachon s description of his childhood impressions of Paris under the German occupation offers new insights into micro resistance at the level of alternative perceptions and subliminal communications George Brown s contribution to the thesis of this book although first published in 1978 is his self conscious description of one man entering into a dialectical relationship with prison reforms which pushed him into a deeper understanding of the injustices that he had suffered as a child and young adult growing up Black in the United States In the third chapter of this book Francis Feeley uncovers the economic interests behind the production of political repression His analysis of the Homeland Security Act and the growth of surveillance and security industry that it gave rise to supports the main thesis of this book namely that the contradictions which generate democracy exist beyond the control and very often beyond the apprehension of the society in which they are created Patrick Litsangou s essay in chapter 4 contributes to our understanding of the dialectical relationship between the mainstream media and the alternative media in the period of the U S military invasion of Iraq He illustrates in this essay how the demise of mainstream medias independence gave rise to the extraordinary success of the alternative media as large numbers of people living within the United States vigorously struggled to stay informed in order to understand the palpable contradictions in their lives In the fifth chapter Peterson Nnaji for recounts the histories of resistance and counter resistance around the aggressive activities of US petroleum companies in the Niger Delta where class warfare has produced strategies and counter tactics that have been evolving for decades in the relationships between the inhabitants of the region and the transnational corporations

which control their political economy to the almost unimaginable detriment of the environment The last chapter of this book is an excerpt from Professor Anthony Wilden s classic work *Man and Woman War and Peace the Strategists Companion* New York 1987 Despite having been published more than two decades ago this theoretical study stands as a contemporary statement on the epistemology of strategic thought The indirect approach described here by Wilden complements Professor Feeley s thesis that the forces of resistance and the forces of counter resistance are intimately related that from this interrelationship new cultural expressions are created some of which have long term effects on the society in which they occur The formation of a revolutionary counterculture is but one example of the effects of this power interface As professor Wilden notes no confrontation occurs without some structural modification taking place The forces of order are never the same after they successfully repress the forces of change and guerrilla warfare tactics are constantly evolving adapting to new conditions Professor Feeley concludes this anthology by attempting to synthesize the main ideas presented in the seven essays in this book The main thread running through these chapters is the idea that cultural order cannot be reduced to the natural order This idea is clearly expressed in each of the essays found in this book and the conclusion convincingly states the view that social science like all other cultural expressions exists beyond being in the realm of becoming

Teaching Sustainability / Teaching Sustainably Kirsten Allen Bartels,Kelly A. Parker,2023-07-03 Over the coming decades every academic discipline will have to respond to the paradigm of more sustainable life practices because students will be living in a world challenged by competition for resources and climate change and will demand that every academic discipline demonstrate substantial and corresponding relevance This book takes as its point of departure that integrating a component of sustainability into a discipline specific course arises from an educator asking a simple question in the coming decades as humanity faces unprecedented challenges what can my discipline or area of research contribute toward a better understanding of these issues The discipline need not be future

oriented an archaeologist for instance could incorporate into a course some aspects of sustainable archaeological practices in areas threatened by rapid climate change as well as examples of sustainable or unsustainable ways of living practiced by members of the long gone society under investigation This book also argues that courses about sustainability need to cross disciplinary boundaries both because of the inter relatedness of the issues and because students will require the ability to use interdisciplinary approaches to thrive through the multiple careers most of them will face The contributions to this book are presented under four sections Sustainability as a Core Value in Education considers the rationale for incorporating sustainability in disciplinary courses Teaching Sustainability in the Academic Disciplines presents eight examples of courses from disciplines as varied as agriculture composition engineering and teacher education Education as a Sustainable Practice reviews how the physical environment of the classroom and the delivery of instruction need themselves to reflect the values being taught The final section addresses the issues of leadership and long term institutional change needed to embed sustainable practice as a core value on campus
