Aerospace Predictive Maintenance Charles Edwin Dibsedale, 2020-12-30 Aerospace Predictive Maintenance Fundamental Concepts written by longtime practitioner Charles E Dibsedale based in the UK considers PdM a subset of Condition Based Maintenance CBM and must obey the same underlying rules and pre requisites that apply to it Yet PdM is new because it takes advantage of emerging digital technology in sensing acquiring data communicating the data and processing it This capability can autonomously analyse the data and send alerts and advice to decision makers potentially reducing through life cost and improving safety Aerospace Predictive Maintenance Fundamental Concepts provides a history of maintenance and how performance safety and the environment make direct demands on maintenance to deliver more for less in multiple industries It also covers Integrated Vehicle Health Management IVHM that aims to provide a platformcentric framework for PdM in the mobility domain The book discusses PdM maturity offering a context of the transformation of data through information and knowledge Understanding some of the precepts of knowledge management provides a really useful and powerful perspective on PdM as an information system On the other hand Aerospace Predictive Maintenance Fundamental Concepts also discusses disadvantages of PdM and shows how these may be addressed One of the fundamental changes PdM implies is a shift from deterministic black and white thinking to more nuanced decision making informed by probabilities and uncertainty Other concerns such as data management privacy and ownership are tackled as well Aerospace Predictive Maintenance Fundamental Concepts covers additional technologies such as the Industrial Internet of Things IIOT that will result in proliferation of cheap wireless ultra low power sensors and will transform PdM into a more economical option The book

brings in the future possibilities of nano technology which can be used for new sensors micro robotics for inspections and self healing repairing of systems which can be intergrated with PdM

A Process-Centric View on Predictive Maintenance and Fleet Prognostics. Development of a Process Reference Model and a Development Method for Fleet Prognostics to Guide Predictive Maintenance Projects Carolin Wagner, 2022-08-12 In the age of digitalization and the fourth industrial revolution predictive maintenance is becoming increasingly important as a proactive maintenance type Despite the economic benefits that predictive maintenance generates for companies its practical application is still in its early stages This is often due to two prevailing challenges First there is a deficiency of knowledge about predictive maintenance and its concrete realization Second there is a lack of high quality and rich data of historical machine failures To increase the representativeness of data data from several similar machines i e a fleet should be considered To foster the effective implementation of predictive maintenance supportive guidance in the realization of a predictive maintenance project is needed For this reason this dissertation presents a process reference model and a development method for fleet prognostics The process reference model describes a comprehensive and application independent view of the complete predictive maintenance process The model is supplemented by the fleet prognostic development method To address the specific characteristics of the fleet a systematic process is depicted which provides a means to assess the heterogeneity of the fleet from a data driven perspective and simplifies the design of an algorithm considering fleet data Finally the applicability and value of the research results are demonstrated with three industrial cases
