*CIM. Computer Integrated Manufacturing* August-Wilhelm Scheer, 2012-12-06 Computer Integrated Manufacturing CIM is the computerized handling of integrated operational processes between production planning and control design process planning production and quality assurance The consistent application of information technology along with modern manufacturing techniques and new organizational procedures opens up great potential for rationalization by speeding up processes thereby reducing stocks and improving product structure and delivery times Following a comprehensive justification of the CIM integration principle this book discusses the current state of applications and new demands arising from the integration principle as applied to the individual CIM components The interfaces between business and technical information processing are considered in detail The main emphasis however is on strategies for realization and implementation based on concrete experience The Y CIM information management model developed and tested at the author's institute is presented as a procedural method for implementing CIM and demonstrated using up to date examples In addition to the procedure for developing a CIM strategy concrete sub projects are developed which are directed at specific sector or enterprise structures The survey of further CIM developments including design stage cost estimation use of expert systems and inter company process chains have proved to be effective CIM components since the first edition of this book and are now treated in the main text Six German and five American industrial implementations are presented to illustrate the diverse areas of emphasis in the implementation sequence and to indicate how CIM can be realized with currently available data processing tools

*Computer Integrated Manufacturing* Alan Weatherall, 2013-09-03 Computer Integrated Manufacturing From Fundamentals to Implementation is based on a course in computer integrated manufacturing CIM which is part of the Production Engineering Tripos for postgraduate level students at Cambridge University The book is intended to provide a thorough coverage of a difficult subject and to communicate principles as well as something of current practice This should give a firm basis of knowledge in CIM and develop an understanding that will be valid for many years in changing business and manufacturing environments The book covers CIM and manufacturing systems at a technical level from description of the conventional islands of computerization to the components of CIM architecture The business objectives of CIM are described from analysis of the business environment to cost justification and implementation of CIM systems CIM is seen as a business tool and not as an end in itself Each individual and company needs to adapt the tools described in this book to best effect Study of this book should enable postgraduate students and professional engineers to deal confidently with the subject and use CIM techniques profitably

[Justification Methods for Computer Integrated Manufacturing Systems](#) H. R. Parsaei, Thomas Ward, Waldemar Karwowski, 1990 Advanced automated manufacturing technology systems are perceived by many manufacturers to be the latest alternative to meet today's global market needs Higher productivity better quality and flexibility are just a few examples of the numerous benefits which can be achieved by

implementing modern computer controlled manufacturing systems Many firms perceive Computer Integrated Manufacturing CIM as one of the most promising paths to achieve manufacturing excellence A CIM project can not be successfully implemented unless it is supported by long term strategic planning and economic analysis of the required capital investment decisions This book treats planning as the first step in the justification process Papers explore both strategic planning for computer integrated manufacturing CIM and more detailed issues such as part tool grouping and machine loading The critical issue of planning for communications between various levels of computation and devices on the floor is reviewed Capacity planning and planning for assembly and quality control are also covered The important role of champions in justification is explored Computer Integrated Manufacturing Steven A.
