An Introduction To Statistics Using Microsoft Excel:

An Introduction to Statistics using Microsoft Excel Dan Remenyi, George Onofrei, Joseph English, 2022-01-01 A significant amount of academic research has been conducted using quantitative research methods. In many universities, large and expensive statistical software has been acquired. However, much of this software requires a considerable amount of training before researchers are capable of using it correctly, and this can cause difficulties. Many academic researchers are surprised by just how much analytical work can be done using the ubiquitous Microsoft Excel software. This book presents a course on the use of statistics in academic research, starting with simple descriptive techniques and working through to sophisticated inferential methods. A step-by-step approach has been taken and has been described by users of this book as similar to having the teacher standing by you as you learn about some of the sophisticated methods of handling and understanding data. Readers of this book have my best wishes in achieving their objectives through their work with academic research.

An Introduction to Statistics using Microsoft Excel 2nd Edition Dan Remenyi, George Onofrei, Joseph English, 2015-05-26 The handling of numbers in arithmetic and the progression into the more abstract field of mathematics and statistics is generally approached poorly in our education system. The inadequacy is not necessarily in the teaching techniques or the books and other text used but rather in the attitude towards these subjects. These subjects are seen as something which has to be taught because it is part of a preordained curriculum rather than a set of tools which are available to help people live a fuller, more productive and more interesting life. It is so enlightening when one hears people say, "I thought that when I left school I was leaving all the maths stuff behind me" or "I was bored witless by all those numbers and formulas that were forced down my throat." This book was written out of a frustration at seeing statistics taught through formal methods using large-scale statistical software packages. It seemed to me that very little was learned by this process, and quite often both the teachers and the students were in denial. It is true that the students were generally able to pick up enough knowledge to pass an examination or to complete a piece of research. But I seldom saw anything which could be regarded as deep learning, and the little which had been learned did not stay for any length of time in the heads of these learners. I know people who have passed several university-level courses in statistics and they can hardly recall, never mind use any of what was taught to them.
