Visualizing Quantum Mechanics with Python
Steve Spicklemire, 2024-06-05

Quantum Mechanics can be an abstract and complex subject Students often complain of confusion struggle and frustration as they try to master the topic The goal of this book is to reduce the complexity and clarify the abstractions with concrete visual examples driven by simple python programs It is assumed that the reader is concurrently taking a course in quantum mechanics or self studying quantum mechanics but is looking for supplementary material to help with understanding and visualizing how quantum mechanics works The focus of this book is writing python programs to visualize the underlying behavior of the mathematical theory The background needed to understand quantum mechanics is differential equations linear algebra and modern physics We need a strong foundation in differential equations and linear algebra because the behavior of quantum systems is governed by equations that are written in terms of these concepts Modern physics includes concepts such as special relativity and quantum phenomena like the photoelectric effect and energy quantization that the theory of quantum mechanics seeks to explain This book is also not an introduction to the python programming language or to numpy or even to VPython However its programming examples start simply and grow more complex as the chapters progress so deep expertise in any of these is not a pre requisite Key features Provides an accessible and practical guide to the abstractions in quantum mechanics with concrete visual examples driven by simple python programs Contains few derivations equations and proofs For complete beginners of python programming appendix B serves as a very brief introduction to the main concepts needed to understand the code in this book Dr Stephen Spicklemire is Associate Professor of Physics at the University of Indianapolis USA He has been teaching physics at the University of Indianapolis for more than 30 years From the implementation of flipped physics class to the modernization of scientific

computing and laboratory instrumentation courses he has brought the strengths of his background in physics engineering and computer science into the classroom Dr Spicklemire also does IT and engineering consulting He is an active participant in several national research initiatives relating to improving physics education These range from improving materials to help students prepare for class to supporting students success through standards based grading He is an active developer of the VPython and WebVPython projects and a contributor to the Matter and Interactions textbook
