Analyses For Durability And System Design Lifetime A Multidisciplinary Approach:

Analyses for Durability and System Design Lifetime Joseph H. Saleh, 2007-12-10 An issue in engineering design is a system's design lifetime. Economists study durability choice problems for consumer goods but seldom address lifetime problems of complex engineering systems. The issues for engineering systems are complex and multidisciplinary and require an understanding of the technicalities of durability and the economic implications of the marginal cost of durability and value maximization. Commonly the design lifetime for an infrastructure is set between 30 and 70 years. Satellite lifetimes are also assigned arbitrarily or with limited analysis. This book provides a systemic qualitative and quantitative approach to these problems addressing first the technicality of durability, second the marginal cost of durability and third the durability choice problem for complex engineering systems with network externalities, competition and market uncertainty and obsolescence effects, technology evolution. Since the analyses are system specific, a satellite example is used to illustrate the essence and provide a quantitative application of said analyses.

Scientific and Technical Aerospace Reports, 1989 **BRI Proceedings**, 1995 **Cities and Their Vital Systems** Advisory Committee on Technology and Society, 1989 *Cities and Their Vital Systems* asks basic questions about the longevity, utility and nature of urban infrastructures, analyzes how they grow, interact and change and asks how, when and at what cost they should be replaced. Among the topics discussed are problems arising from increasing air travel and airport congestion, the adequacy of water supplies and waste treatment, the impact of new technologies on construction, urban real estate values and the field of telematics, the combination of computers and telecommunications that makes money machines and national newspapers possible.
