By: Jonathan DeRoner

This tutorial is to serve the purpose of performing calculations within the stress analysis environment of Autodesk Inventor Professional. While the environment may slightly change in terms of layout during each release, this will give the basics on how to set up the different types of calculations that can be performed. This tutorial is being written using Autodesk Inventor Professional 2014.

Getting Started

You will first want to begin by opening the desired part in Inventor. For this part of the tutorial we will be using a simple 1 X 2 inch rectangular beam that is 12 inches long.

Name: FEA Tutorial Bar

A- Defining Material

Inventor has a very large library of materials to choose from for your parts that you produce. By applying these materials, this will make calculations that we will be doing as accurate as possible. For this part we will be applying **Mild Steel** as our material to the rectangular beam.

Step 1: Click on the dropdown list above and locate **Steel, Mild** in the list. You will notice that once you select the material that the color of the part changes to a brighter gray color. This means the part is now made of mild steel in Inventor.
