Microbiology authored by Dr Tanmay Mehta is an innovative and comprehensive resource meticulously designed to demystify the intricate realm of medical microbiology. The book employs a unique pedagogical approach that enhances understanding and facilitates the recall of complex concepts. Each chapter commences with a carefully crafted case study providing pertinent clues emphasized in bold that guide the reader towards the diagnosis. This is succeeded by a section detailing the most probable diagnosis derived from the case study. The subsequent section elucidates the causative agents enumerated in the order of their frequency. A distinctive feature of this book is the representation of the pathogenesis of each disease in the form of a flowchart rendering the process logical and memorable. The book further explores the clinical manifestations of each disease outlining all common presentations. This is followed by a comprehensive list of investigations that are typically conducted in the given clinical scenario. The treatment segment is categorized into three sub-sections: supportive, empirical, and specific, thereby providing a holistic approach to disease management. Preventive strategies are also discussed, typically bifurcated into general measures and immunoprophylaxis, which includes vaccines and/or immunoglobulins. Case-Based Medical Microbiology is an invaluable asset for those seeking to comprehend medical microbiology through a case-based format. Its simplistic, logical, and comprehensive approach renders it an indispensable tool for both learning and teaching.

**Cases in Human Parasitology** Judith Stephenson Heelan, 2004. *Cases in Human Parasitology* focuses solely on parasites that adversely affect humans. Intended as a supplement to textbooks in human parasitology for undergraduate and medical school courses, this book of 62 case studies is also an important educational reference source for health care scientists active in the field of parasitology. The first four sections cover different groups of parasites including intestinal protozoa, blood and tissue protozoa, cestodes, trematodes, and intestinal nematodes, and blood and tissue nematodes. The last section covers challenging cases and details non-parasitic infections in patients with symptoms closely resembling those of parasitic infections. Each case study opens with a patient history and description of symptoms and most are accompanied by a color image of the parasite described. Thought-provoking questions are posed covering everything from diagnosis and the life cycle of the identified parasite to epidemiology and prevention. The questions stimulate discussion while emphasizing the relationship of diagnosis to patient care. Cases present new, emerging, and well-known parasites, and parasites infrequently encountered in the United States are included. The book concludes with a glossary of descriptive terms. *Cases in Human Parasitology* is an excellent reinforcement of material learned in a clinical or laboratory setting. It will be useful for pathology residents and infectious disease fellows in preparing for board exams, and it will serve in continuing the education of medical technologists involved in diagnostic parasitology. **Key Features:** Over 60 case studies focusing on intestinal protozoa, blood and tissue protozoa, cestodes, trematodes, and intestinal nematodes, as well as blood and tissue nematodes. Concise cases begin with patient history and symptoms, relevant clinical findings, and laboratory data, and in most cases, relevant four-color images proceed with discussion questions and conclude with answers to the questions. Challenging cases throughout final section.
