Coders at Work Peter Seibel, 2010-05-04 Peter Seibel interviews 15 of the most interesting computer programmers alive today in *Coders at Work* offering a companion volume to Apress's highly acclaimed best seller *Founders at Work* by Jessica Livingston. As the words at work suggest, Peter Seibel focuses on how his interviewees tackle the day-to-day work of programming while revealing much more like how they became great programmers, how they recognize programming talent in others, and what kinds of problems they find most interesting. Hundreds of people have suggested names of programmers to interview on the *Coders at Work* web site [www.codersatwork.com](http://www.codersatwork.com). The complete list was 284 names. Having digested everyone's feedback, we selected 15 folks who've been kind enough to agree to be interviewed: Frances Allen, Pioneer in optimizing compilers, first woman to win the Turing Award 2006 and first female IBM fellow; Joe Armstrong, Inventor of Erlang; Joshua Bloch, Author of the Java collections framework, now at Google; Bernie Cosell, One of the main software guys behind the original ARPANET IMPs and a master debugger; Douglas Crockford, JSON founder, JavaScript architect at Yahoo; L. Peter Deutsch, Author of Ghostscript, implementer of Smalltalk 80 at Xerox PARC and Lisp 1.5 on PDP-1; Brendan Eich, Inventor of JavaScript, CTO of the Mozilla Corporation; Brad Fitzpatrick, Writer of LiveJournal, OpenID, memcached, and Perlbal; Dan Ingalls, Smalltalk implementor and designer; Simon Peyton Jones, Coinventor of Haskell and lead designer of Glasgow Haskell Compiler; Donald Knuth, Author of *The Art of Computer Programming* and creator of TeX; Peter Norvig, Director of Research at Google and author of the standard text on AI; Guy Steele, Coinventor of Scheme and part of the Common Lisp Gang of Five, currently working on Fortress; Ken Thompson, Inventor of UNIX; Jamie Zawinski, Author of XEmacs and early Netscape/Mozilla hacker.

*Coding Art* Yu Zhang, 2021. Finally a book on creative programming written directly for artists and designers. Rather than following a computer science curriculum, this book is aimed at creatives who are working in the intersection of design, art, and education. In this book, you'll learn to apply computation into the creative process by following a four-step process and through this, land in the cross-section of coding and art with a focus on practical examples and relevant work structures. You'll follow a real-world use case of computation art and see how it relates back to the four key pillars and addresses potential pitfalls and challenges in the creative process. All code examples are presented in a fully integrated Processing example library, making it easy for readers to get started. This unique and finely balanced approach between skill acquisition and the creative process and development makes *Coding Art* a functional reference book for both creative programming and the creative process for professors and students alike. You will review ideas and approaches from creative programming to different professional domains. Work with computational tools like the Processing language. Understand the skills needed to move from static elements to animation to interaction. Use interactivity as input to bring creative concepts closer to refinement and depth. Simplify and extend the design of aesthetics, rhythms, and smoothness with data structures. Leverage the diversity of art code on other platforms like the web or mobile applications. Understand the end-to-end process.

of computation art through real world use cases Study best practices common pitfalls and challenges of the creative process
