Homotopy-Based Methods in Water Engineering Manotosh Kumbhakar, Vijay P. Singh, 2023-07-20 Most complex physical phenomena can be described by nonlinear equations specifically differential equations In water engineering nonlinear differential equations play a vital role in modeling physical processes Analytical solutions to strong nonlinear problems are not easily tractable and existing techniques are problem specific and applicable for specific types of equations Exploring the concept of homotopy from topology different kinds of homotopy based methods have been proposed for analytically solving nonlinear differential equations given by approximate series solutions Homotopy Based Methods in Water Engineering attempts to present the wide applicability of these methods to water engineering problems It solves all kinds of nonlinear equations namely algebraic transcendental equations ordinary differential equations ODEs systems of ODEs partial differential equations PDEs systems of PDEs and integro differential equations using the homotopy based methods The content of the book deals with some selected problems of hydraulics of open channel flow with or without sediment transport groundwater hydrology surface water hydrology general Burger s equation and water quality Features Provides analytical treatments to some key problems in water engineering Describes the applicability of homotopy based methods for solving nonlinear equations particularly differential equations Compares different approaches in dealing with issues of nonlinearity
